# Quality features

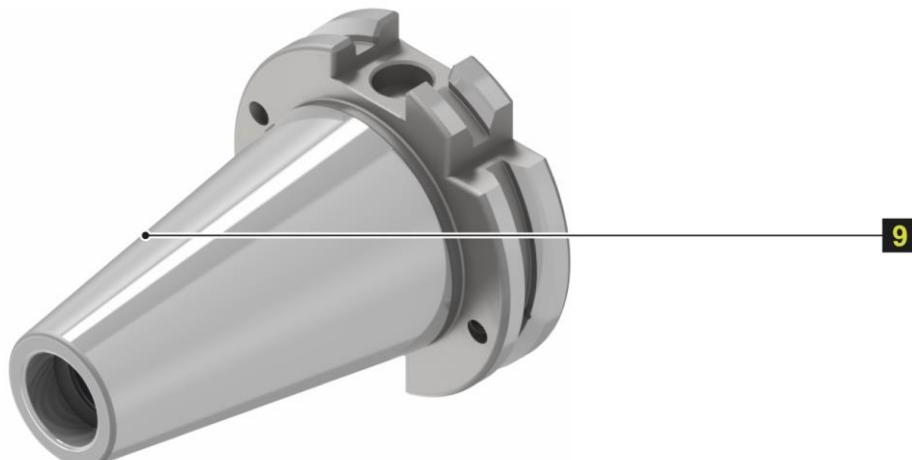

- ▶ **HSK-A, ISO 7388-1 and CORUM have included the bore for disk-chip as standard**
- ▶ **Hard reworked HSK-discharge surface guarantees:**
  - safe release of HSK at tool change
- ▶ **Hard reworked drive slots on HSK-taper guarantees:**
  - 100% symmetry of the HSK-slots
  - perfect seat and torque transfer in machine spindle

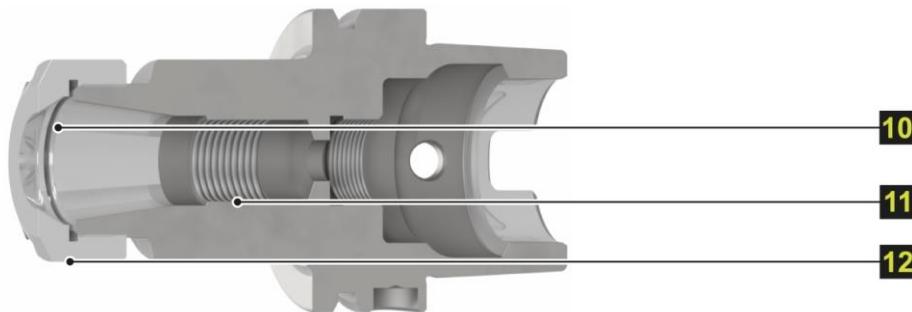

- ▶ **All toolholders fine balanced to G2,5 25.000 or max. unbalance <= 1 gmm, for:**
  - smooth and bearing protecting spindle run
  - longer spindle life cycle
  - maximum tool life
  - better milling surface

- 5 ► Hard reworked HSK-shoulder guarantees:
  - perfect runout of clamping shoulder (max. 10 : 5 times more accurate than DIN)
  - highest runout accuracy
  - maximum clamping force in spindle
  - maximum radial rigidity
- 6 ► Long version with transition radius for increased radial rigidity
- 7 ► Standard shrink fit chucks with 4-threads for supplementary fine balancing
- 8 ► Long shrink fit for maximum clamping force with insertion radius only

- 9 ► All tapers in tolerance quality AT3

- 10 ► Radius transfer to ER-taper maintains accuracy of the collet
- 11 ► Big insertion depth for tools with long shank
- 12 ► Fine balanced and hardened clamping nut

13

► **ZOLLER TITANIUM - High precision collet shrink fit holder with pull-out protection**

**Runout tolerance of the different toolholder types:**

Toolholder type	Runout A < 160	Runout A ≥ 160
Endmill holder Weldon, Collet cuck, Shrink fit holder, Endmill holder Whistle Notch	≤ 3 µ	≤ 4 µ
Shell mill holder, Combi shell mill holder	≤ 6 µ	≤ 6 µ
Morse taper adapter	≤ 8 µ	

**Identification with ZOLLER marking solution »idChip«**

**ZOLLER offers you the opportunity to supply our tool holders in standard size ( $\varnothing 10 \times 4,5$  mm) with »idChip«. The following interfaces are already prepared for assembling the data chip:**

- |               |                    |                        |
|---------------|--------------------|------------------------|
| ▪ HSK-A       | Hollow shank taper | DIN 69893 / ISO 12164  |
| ▪ SK          | Steep taper        | DIN 69871 / ISO 7388-1 |
| ▪ PSC (CORUM) | Polygon interface  | ISO 26623-1            |

Various types and suppliers are available (low frequency / high frequency).

# Low invest, high return

**The cost of tool holders is less than 1 % of the total production costs of a workpiece and therefore nearly insignificant. But they offer enormous savings potential: because high quality in the tool holding interface enables you to:**

- increase tool life significantly,
- improve machining processes in terms of productivity and workpiece quality,
- extend the life of the spindle.

As our calculation example shows, the use of high-quality ZOLLER tool holders lead to significant savings in the tool costs. Even one tool holder can reduce the cost of the tools used in it by more than 6.000 €, with an additional investment of less than 50 €. Who invests in ZOLLER, benefits from a top return!

## ZOLLER – the solution for profitable, successful machining

However, the actual savings potential in relation to your entire manufacturing process is a lot higher than the 6.000 € per tool holder. Because ZOLLER quality also contributes to reducing machine and labour costs. Additional, you increase your productivity by:

- Higher machine availability due to longer spindle service life thanks to the highest balancing quality of the tool holders.
- Bigger cutting volume and thus faster processes by the optimal use of the modern HPC tools.

	«Noname»	ZOLLER
<b>Product:</b>	HSK-A 63 ER-collet chuck with standard collets, clamping diameter 16 mm	HSK-A 63 ER-collet chuck with high-performance nut and with precision collet, clamping diameter 16 mm
<b>Price:</b>	85,00 €	130,00 €
<b>Usage time:</b>		5 years
<b>Tool costs: (Solid carbide endmill, coated, Ø 16 mm)</b>		130,00 € / tool
<b>Consumption:</b>	2 milling cutters per week = 96 milling cutters per year	10 % tool life improvement: 1,8 milling cutters per week = 86 milling cutters per year
<b>Tool costs / year:</b>	12,480,00 €	11,180,00 €
<b>Tool costs / 5 years:</b>	62,400,00 €	55,900,00 €
<b>Savings:</b>		<b>6500,00 €</b> (for 45,00 € additional costs)

Possible tool cost savings: per used ZOLLER tool holder during a working life of 5 years.

## Additional Information:

- ZOLLER TOOLINGS shrink fit chucks are manufactured exclusively from high-temperature tool steel. When used properly, our shrink fit chucks can be used for more than 10,000 shrinking operations without losing accuracy. This means that during each shrinking process the temperature of the ZOLLER TOOLINGS shrink fit chuck must be below 370° Celsius, which is the case with every correctly programmed and correctly adjusted shrink fit device. Only at temperatures above the tempering temperature (>550° Celsius) will there be negative joint deformation of the tool steel. In particular, it must be ensured that only a fully cooled ZOLLER TOOLINGS shrink fit chuck is used for a new shrinking process.
- Permissible transmittable torque Minimum clamping depth (for clamping of fully cylindrical shafts, tolerance h6)

Clamping diameter	Minimum clamping depth (min.)	Permissible transmittable torque
3 mm	12 mm	4 Nm
4 mm	16 mm	11 Nm
5 mm	20 mm	17 Nm
6 mm	26 mm	24 Nm
8 mm	26 mm	45 Nm
10 mm	31 mm	82 Nm
12 mm	37 mm	145 Nm
14 mm	37 mm	190 Nm
16 mm	40 mm	195 Nm
18 mm	40 mm	290 Nm
20 mm	42 mm	450 Nm
25 mm	48 mm	530 Nm
32 mm	52 mm	700 Nm

# HSK-A 63

## ER-Collet chuck

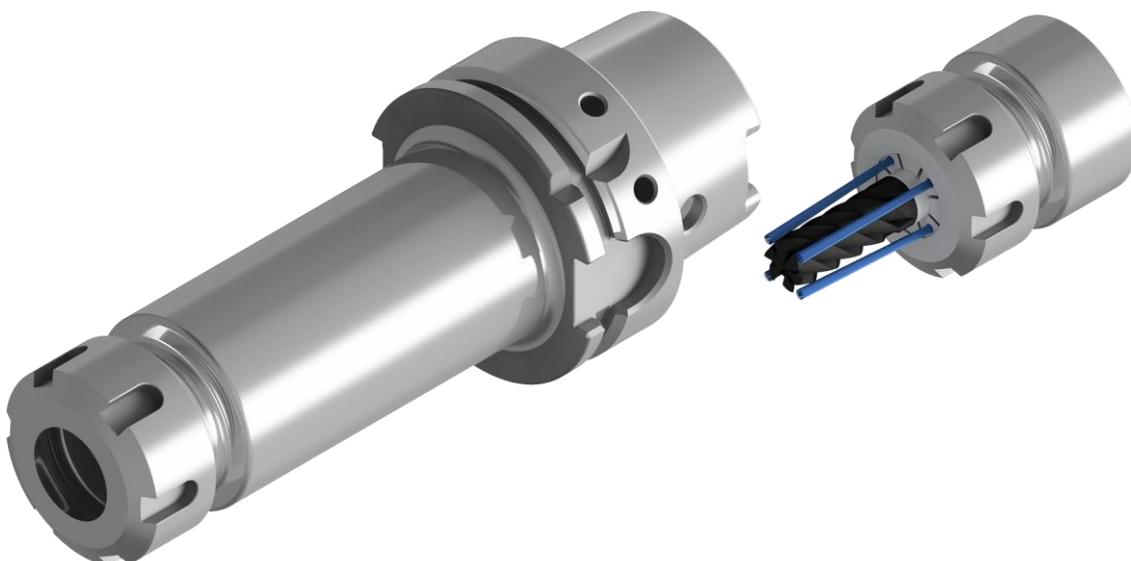

Figure: A = 130

Sealed Version

### Usage:

For clamping tools with cylindrical shank in collets ER.

### Type:

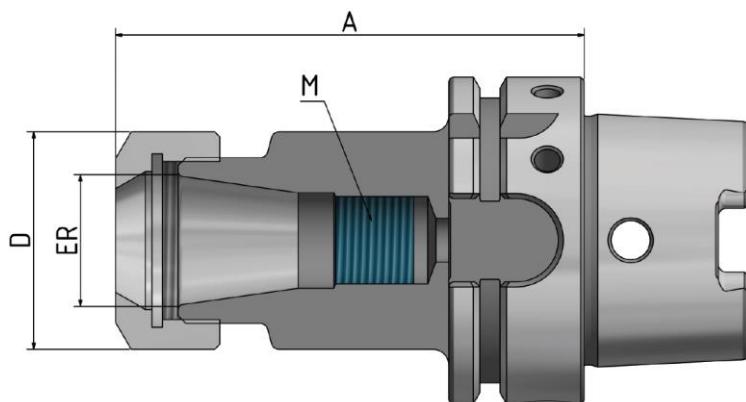

- Runout of outer taper to the inner taper  $\leq 0.003$  mm.
- Precisely matched taper tolerances of the ER inner taper and the collet taper achieve a concentricity of  $\leq 8 \mu$  at  $2.5 \times D$  unclamping length.

### Scope of delivery:

- Clamping nut

### Fine balanced:

G 2.5 at  $25000 \text{ min}^{-1}$  or max. residual unbalance  $\leq 1 \text{ gmm}$

Order no.	HSK	ER	D	A	Clamping range	M	Version

## ER-Collet chuck «Mini»

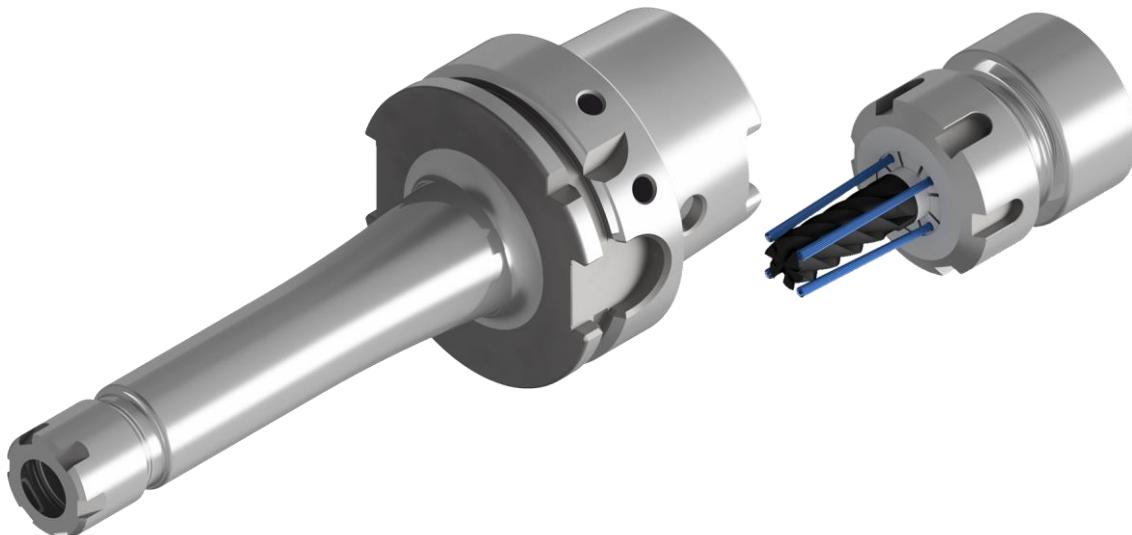

Figure: A = 130

Sealed Version

### Usage:

For clamping tools with cylindrical shank in ER collets.

### Type:

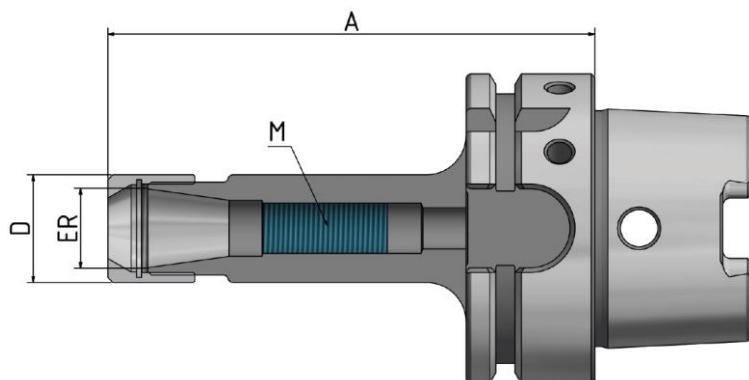

- Concentricity deviation of the taper to the inner taper  $\leq 0.003$  mm.
- Precisely matched taper tolerances of the ER inner taper and the collet taper achieve a concentricity of  $\leq 8 \mu$  at  $2.5 \times D$  unclamping length.

### Scope of delivery:

- With clamping nut

### Fine balanced:

G 2.5 at  $25000 \text{ min}^{-1}$  or max. residual unbalance  $\leq 1 \text{ gmm}$

## HPC Precision ER Collet Chuck HAWK EYE® / ER «Mini»

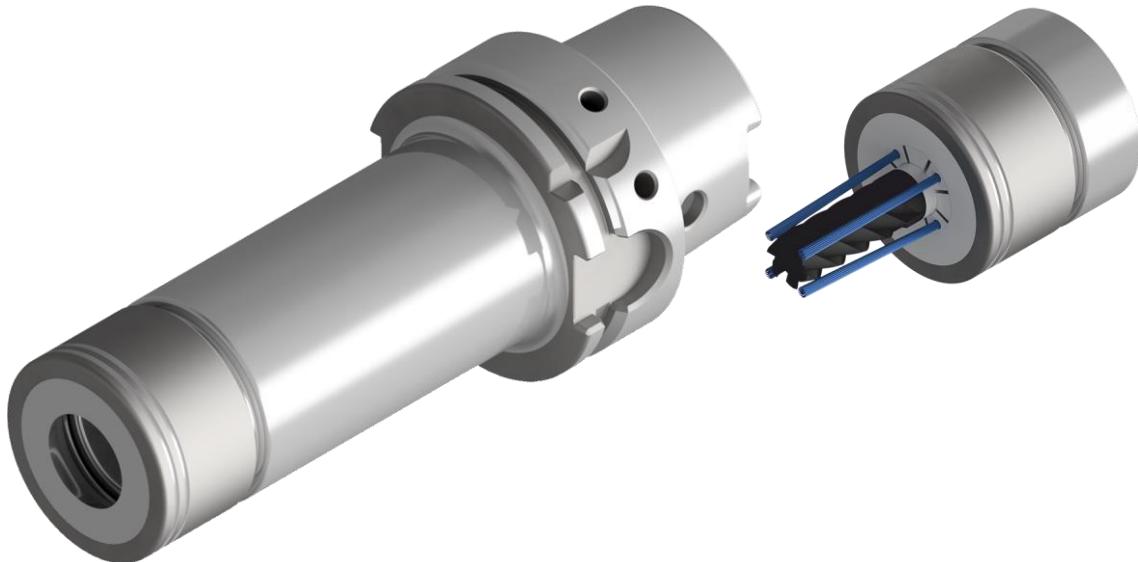

Figure: A = 130

Sealed Version

### Usage:

For clamping tools with cylindrical shank in ER collets.

### Type:

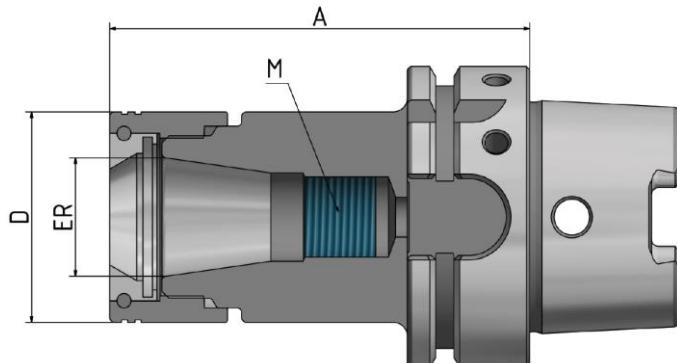

Highly accurate taper tolerances of the ER inner taper and the collet taper achieve a runout accuracy of  $\leq 3 \mu$  at 2.5 D chucking length - when using our  $2 \mu$  collets. Due to the deep seat of the collet, the use of a ball bearing, and coated collet nut; the HAWK EYE collet chuck achieves more than twice the holding force compared to standard ER tool holders. In addition, the reinforced chuck body contributes to significantly higher radial rigidity. HAWK EYE can only clamp tool shanks with the nominal diameter of the collet.

### Scope of delivery:

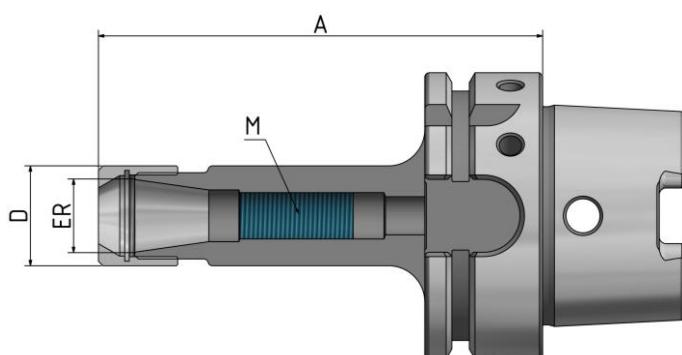

- With round clamping nut

### Fine balanced:

G 2.5 at  $25000 \text{ min}^{-1}$  or max. residual unbalance  $\leq 1 \text{ gmm}$

## Endmill holder Weldon

**Figure: A = 120**

### **Usage:**

For clamping tools with cylindrical shank according to DIN 1835B/6359HB.

### **Type:**

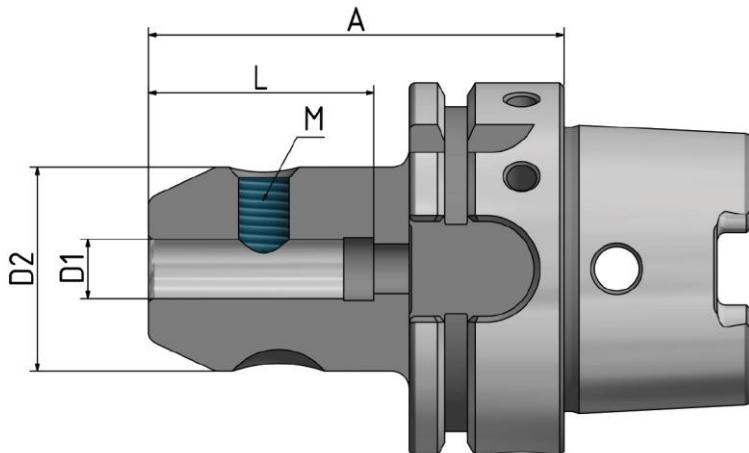

- Concentricity deviation of the taper to the inner taper  $\leq 0.003$  mm.
- Bore tolerance H4 (more accurate than DIN).

### **Scope of delivery:**

- Clamping screw

### **Fine balanced:**

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance  $\leq 1$  gmm

## Endmill holder Weldon «Cool Tool»

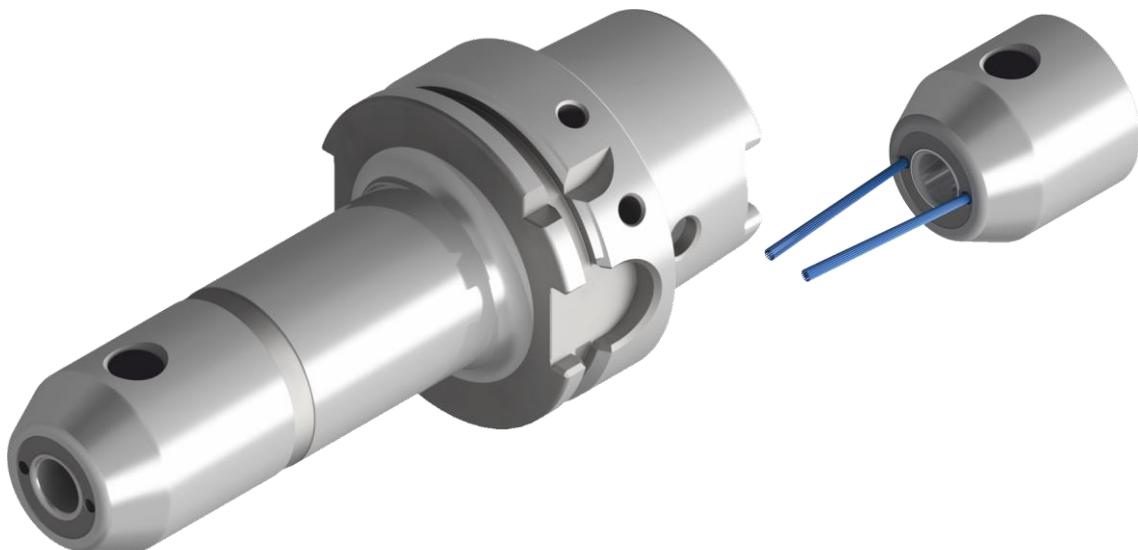

Figure: A = 120

Sealed Version

### Usage:

Ideally suited for use with tools that do not have an internal coolant supply and for machining in awkward locations with poor chip evacuation.

### Type:

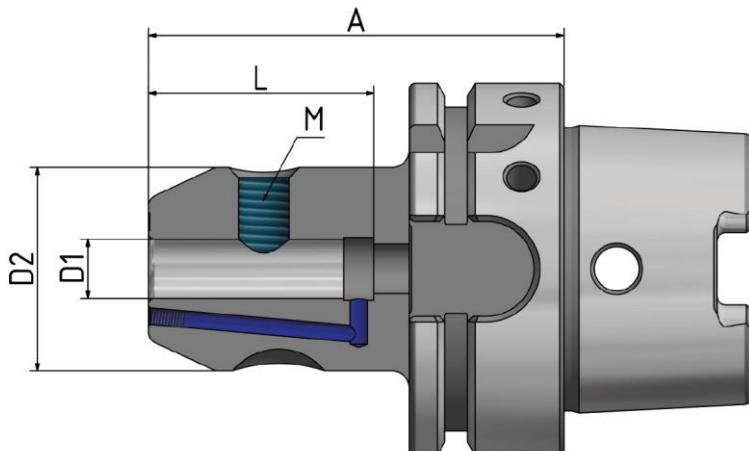

- Two holes in the wall of the Weldon holder direct the coolant to the cutting edge of the tool.
- Concentricity deviation of the taper to the inner taper  $\leq 0.003$  mm.
- Bore tolerance H4 (more accurate than DIN).

### Scope of delivery:

- Clamping screw
- 2 x M3 screws to close the «Cool Tool» hole if required.

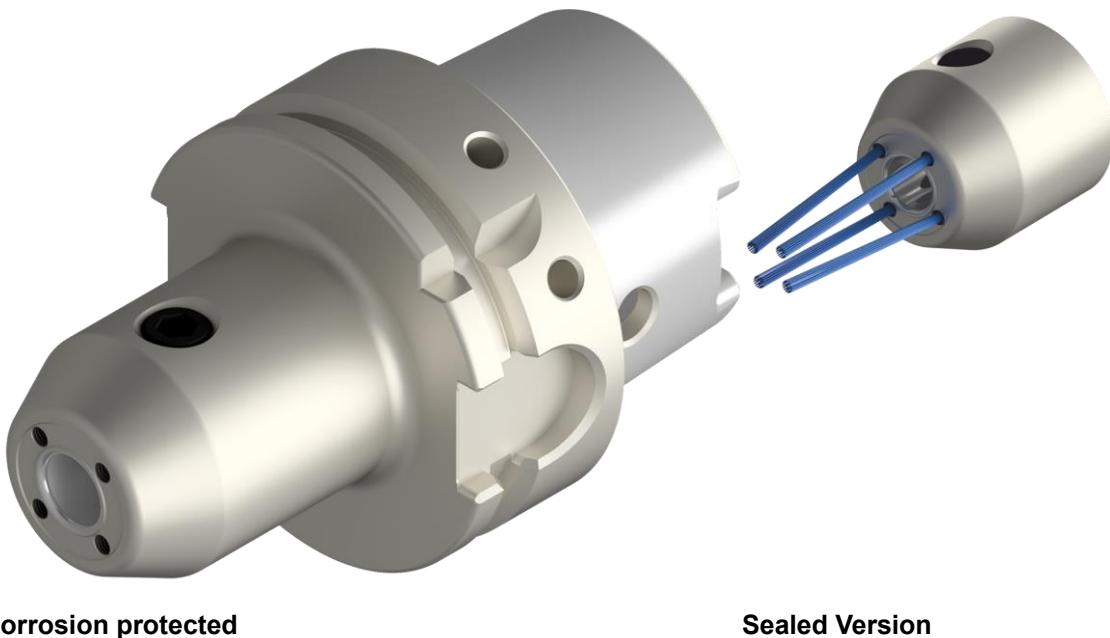

### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance  $\leq 1$  gmm

## Endmill holder Weldon with 4 x «Cool Tool» - corrosion resistant

corrosion protected

Sealed Version

### Usage:

Ideally suited for use with tools that do not have an internal coolant supply and for machining in awkward locations with poor chip evacuation.

### Type:

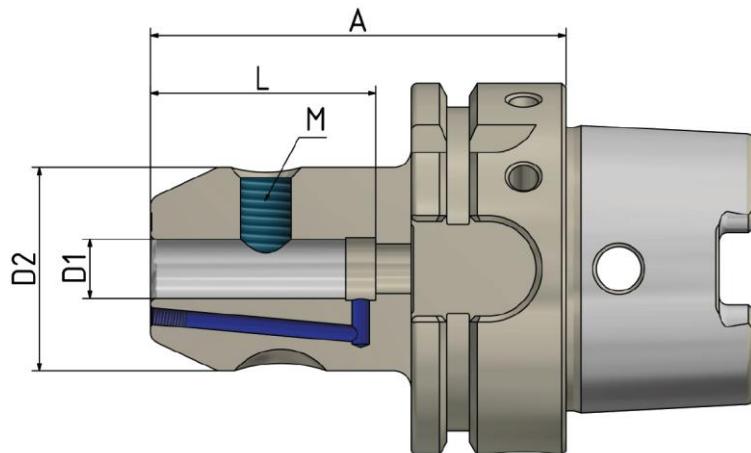

- The complete tool side of the holder is protected against corrosion.
- Concentricity deviation of the taper to D1 ≤ 0.003 mm.
- Bore tolerance H4 (more accurate than DIN).
- Four holes in the wall of the Weldon holder direct the coolant to the cutting edge of the tool.

### Scope of delivery:

- Clamping screw
- 2 x M3 screws to close the «Cool Tool» hole if required.

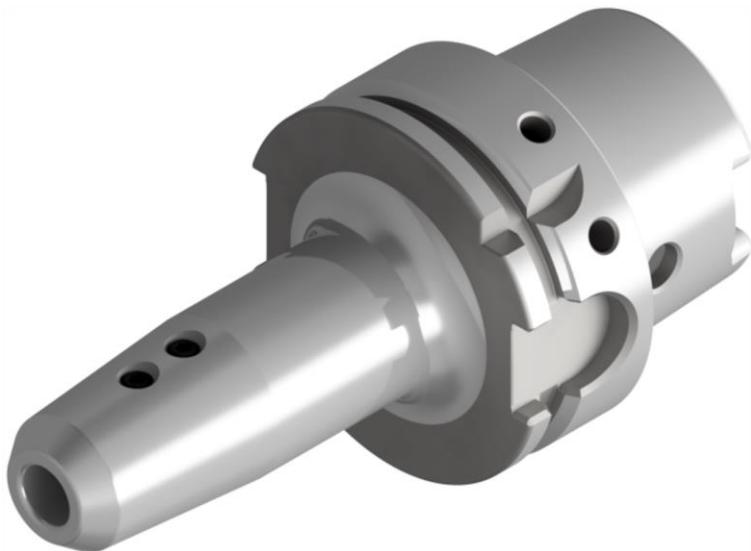

### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance ≤ 1 gmm

## Endmill holder Weldon - slim, long

### Usage:

Combined design for clamping tools with straight shank according to DIN 1835B/6359HB and DIN 1835E/6359HE.

### Type:

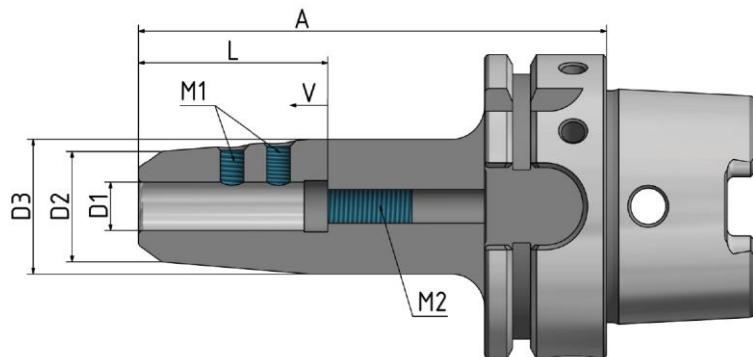

- Concentricity deviation of the taper to  $D_1 \leq 0.003$  mm.
- Bore tolerance H4 (more accurate than DIN).

### Scope of delivery:

- Special clamping screw (with ball head)
- Cannulated length adjustment screw

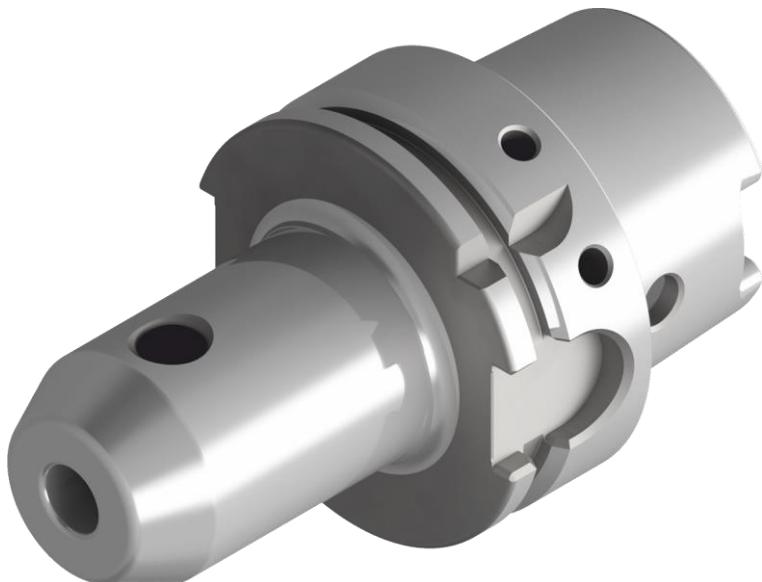

### Fine balanced:

## Endmill holder Whistle-Notch

### Usage:

For clamping tools with cylindrical shank according to DIN 1835E/6359HE.

### Type:

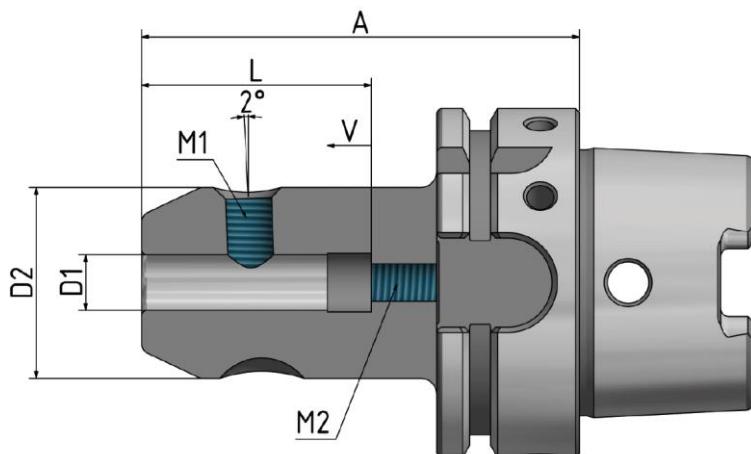

- Concentricity deviation of the taper to D1  $\leq 0.003$  mm.
- Bore tolerance H4 (more accurate than DIN).

### Scope of delivery:

- Clamping screw
- Built-in length adjustment screw

## Shrink fit holder 4.5°

**Figure: A = 160**

### Usage:

For clamping tools with cylindrical shank made of carbide or HSS. The shank tolerance is h6.

### Type:

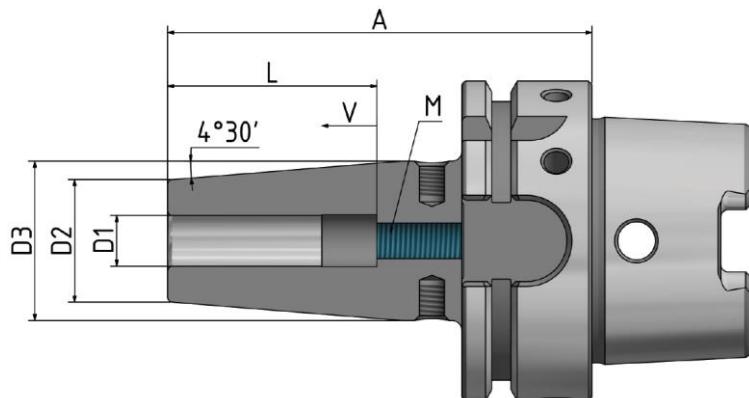

- Made of special heat-resistant steel.
- Suitable for inductive shrink fit devices.
- Concentricity deviation of the taper to D1 ≤ 0.003 mm.
- With four additional threads on the circumference for subsequent fine balancing.

### Scope of delivery:

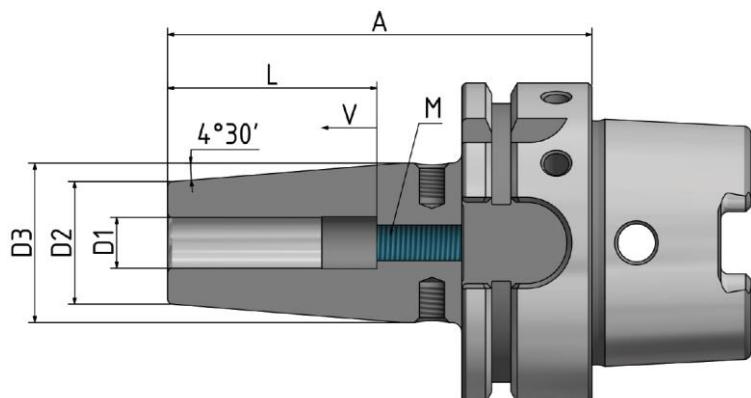

- Built-in length adjustment screw

### Fine balanced:

G 2.5 at 25,000  $\text{min}^{-1}$  or max. residual unbalance ≤ 1 gmm

1) Without additional balancing thread

2) «Cool Tool» hole not resealable

## Shrink fit holder 4.5° long, slim

### Usage:

For clamping tools with cylindrical shank made of carbide or HSS. The shank tolerance is h6.

### Type:

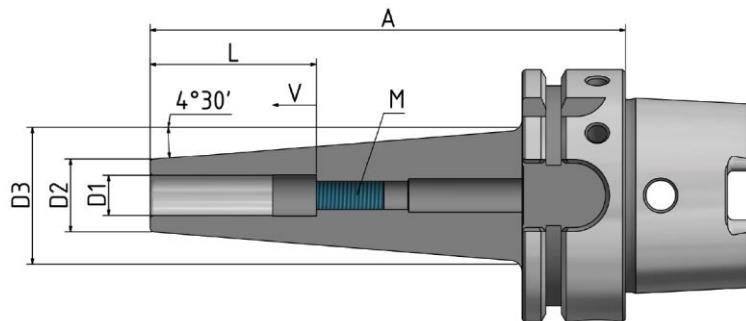

- Made of special heat-resistant steel.
- Suitable for inductive shrink fit devices.
- Concentricity deviation of the taper to D1  $\leq$  0.003 mm.

### Scope of delivery:

- Built-in length adjustment screw

### Fine balanced:

G 2.5 at 25,000  $\text{min}^{-1}$  or max. residual unbalance  $\leq$  1 gmm

## Shrink fit holder 4.5° with 4 x «Cool Tool» – corrosion resistant

**corrosion protected**

**Sealed Version**

### Usage:

For clamping tools with cylindrical shank made of carbide or HSS. The shank tolerance is h6.

### Type:

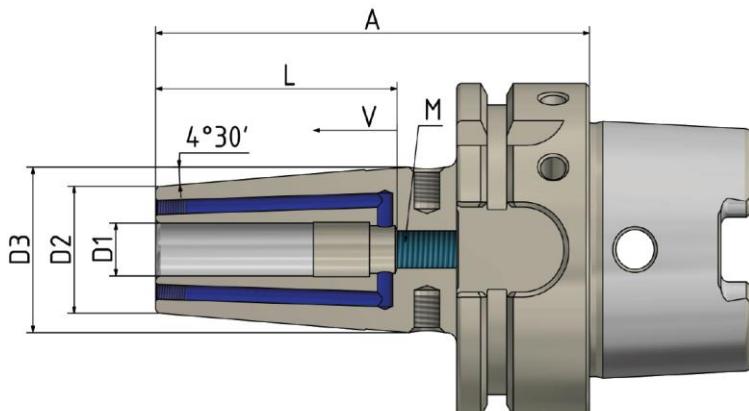

- Made of special heat-resistant steel.
- Suitable for inductive shrink fit devices.
- The tool side of the holder is protected against corrosion.
- With four additional threads on the circumference for subsequent fine balancing.
- Concentricity deviation of the taper to  $D_1 \leq 0.003$  mm.
- Four holes in the wall of the shrink fit chuck direct the coolant to the cutting edge of the tool.

### Scope of delivery:

- Built-in length adjustment screw
- 4 x M3 screws for closing the «Cool Tool» holes, if required

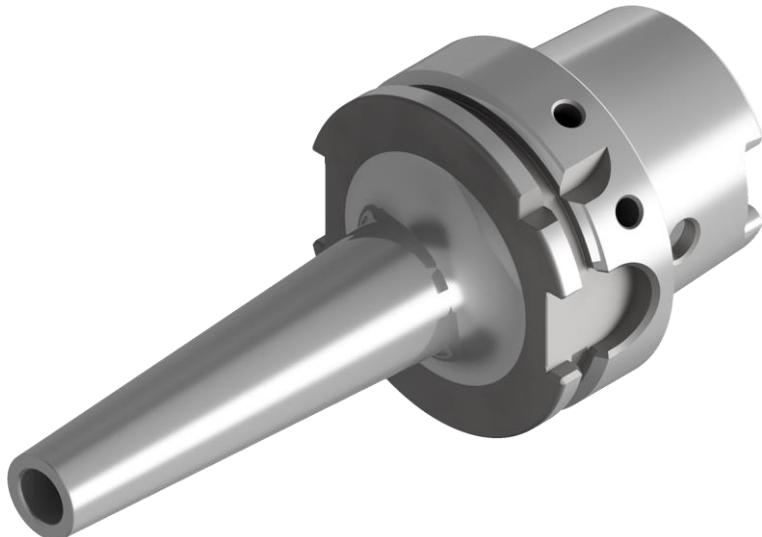

### Fine balanced:

G 2.5 at 25,000  $\text{min}^{-1}$  or max. residual unbalance  $\leq 1$  gmm

## Shell mill holder

**Figure: A = 60**

### **Usage:**

To accommodate cutters with transverse slots.

### **Type:**

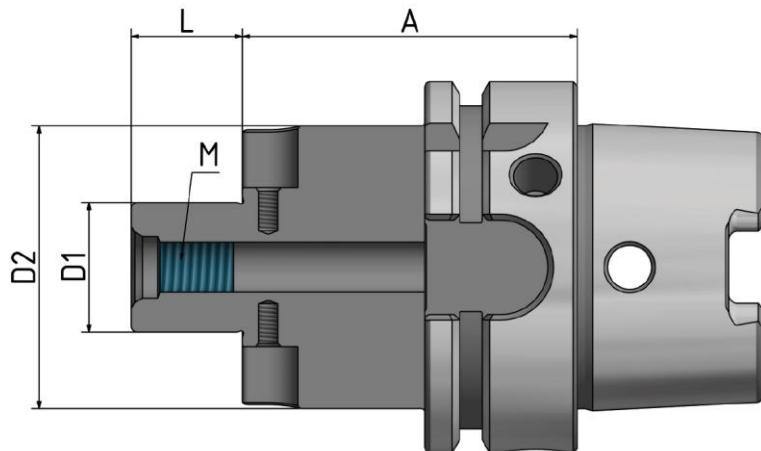

- With enlarged contact surface.
- Concentricity deviation of the taper to the mandrel  $\leq 0.006$  mm.

### **Scope of delivery:**

- Clamping screw
- Fixed driver keys

### **Fine balanced:**

G 2.5 at  $25000 \text{ min}^{-1}$  or max. residual unbalance  $\leq 1$  gmm

# HSK-A 100

## ER-Collet chuck

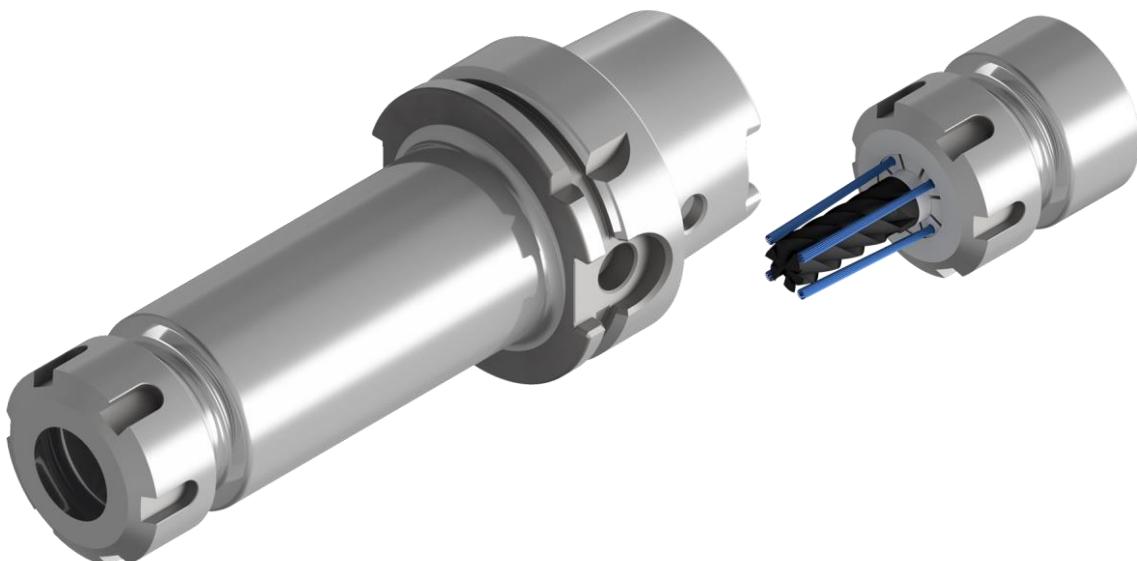

Figure: A = 160

Sealed Version

### Usage:

For clamping tools with cylindrical shank in ER collets.

### Type:

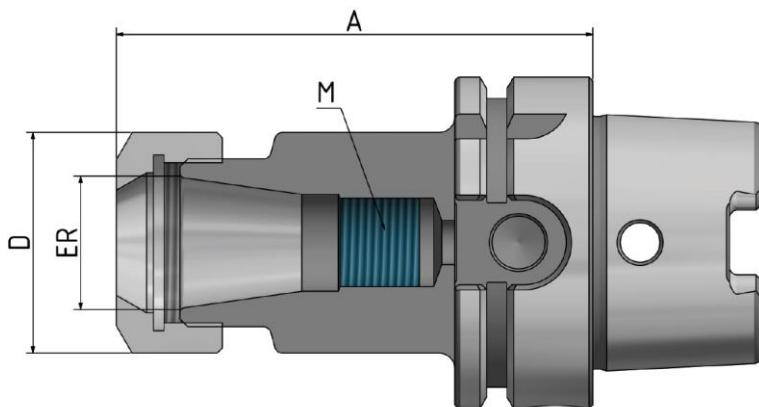

- Concentricity deviation of the taper to the inner taper  $\leq 0.003$  mm.
- Precisely matched taper tolerances of the ER inner taper and the collet taper achieve a concentricity of  $\leq 8 \mu$  at  $2.5 \times D$  unclamping length.

### Scope of delivery:

- Clamping nut

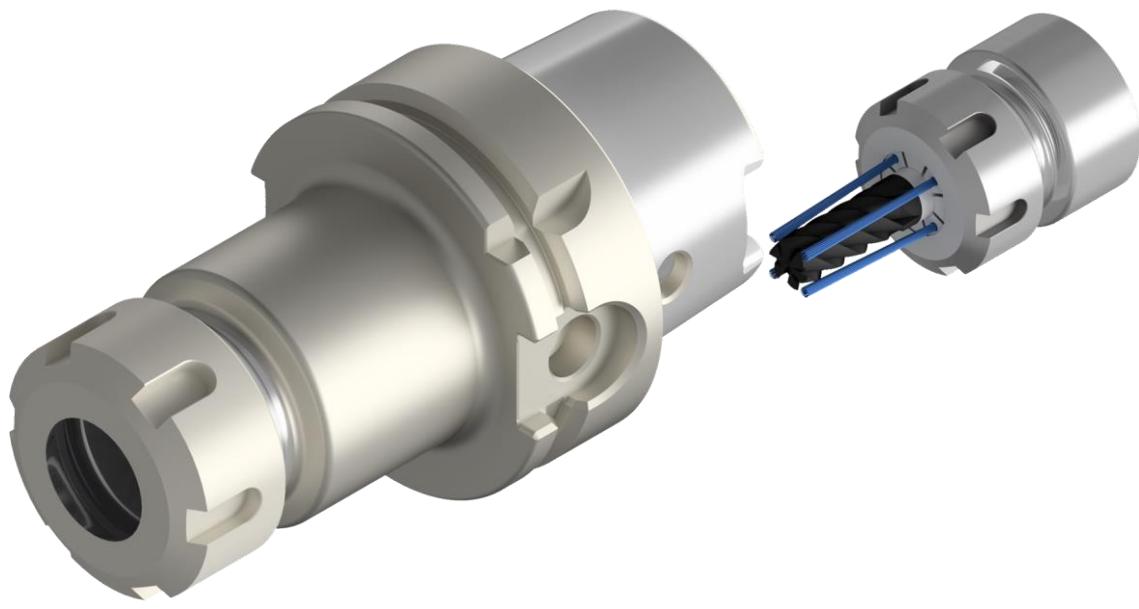

### Fine balanced:

G 2.5 at  $25000 \text{ min}^{-1}$  or max. residual unbalance  $\leq 1 \text{ gmm}$

## HPC Precision ER Collet Chuck HAWK EYE®.

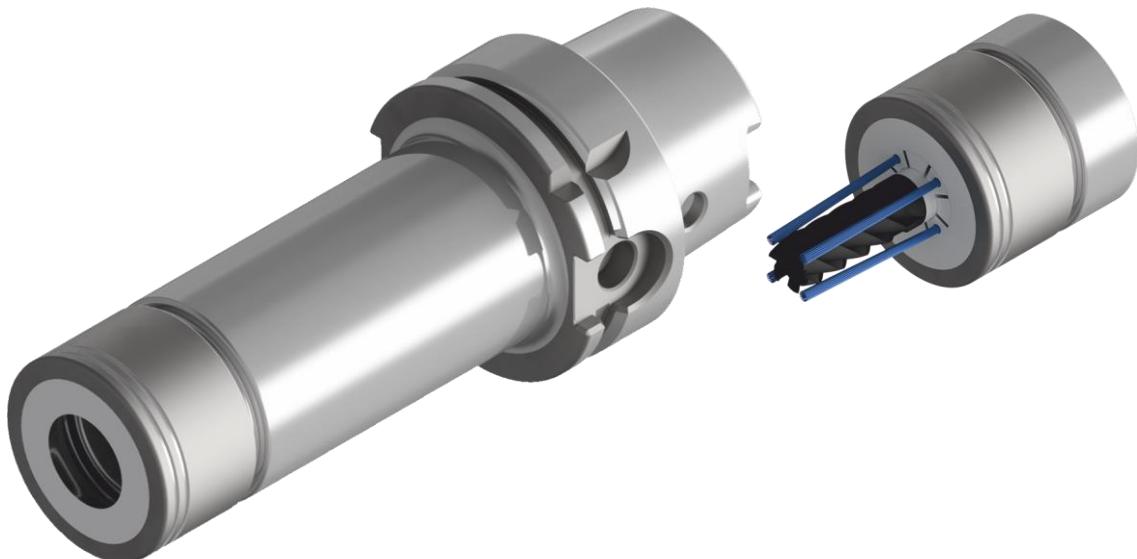

Figure: A = 130

Sealed Version

### Usage:

For clamping tools with cylindrical shank in ER collets.

### Type:

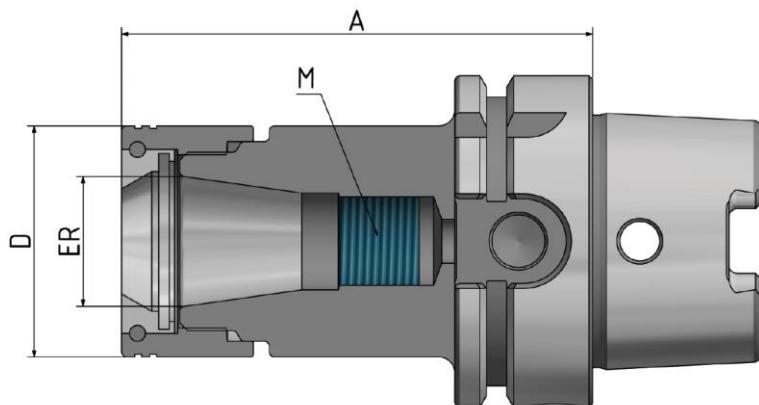

- Highly accurate taper tolerances of the ER inner taper and the collet taper achieve a runout accuracy of  $\leq 3 \mu$  at 2.5 D chucking length - when using our 2  $\mu$  collets. Due to the deep seat of the collet, the use of a ball bearing, and coated collet nut; the HAWK EYE collet chuck achieves more than twice the holding force compared to standard ER tool holders. In addition, the reinforced chuck body contributes to significantly higher radial rigidity. HAWK EYE can only clamp tool shanks with the nominal diameter of the collet.

### Scope of delivery:

- Round clamping nut

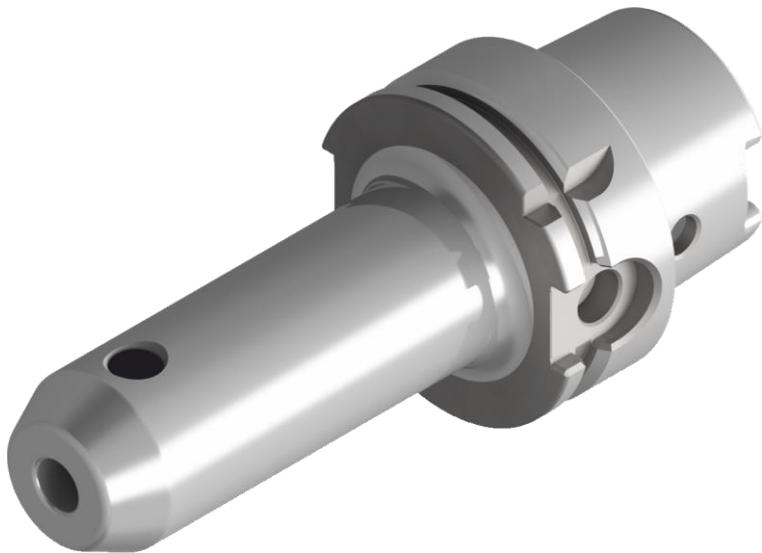

### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance  $\leq 1 \text{ gmm}$

## Endmill holder Weldon «Cool Tool»

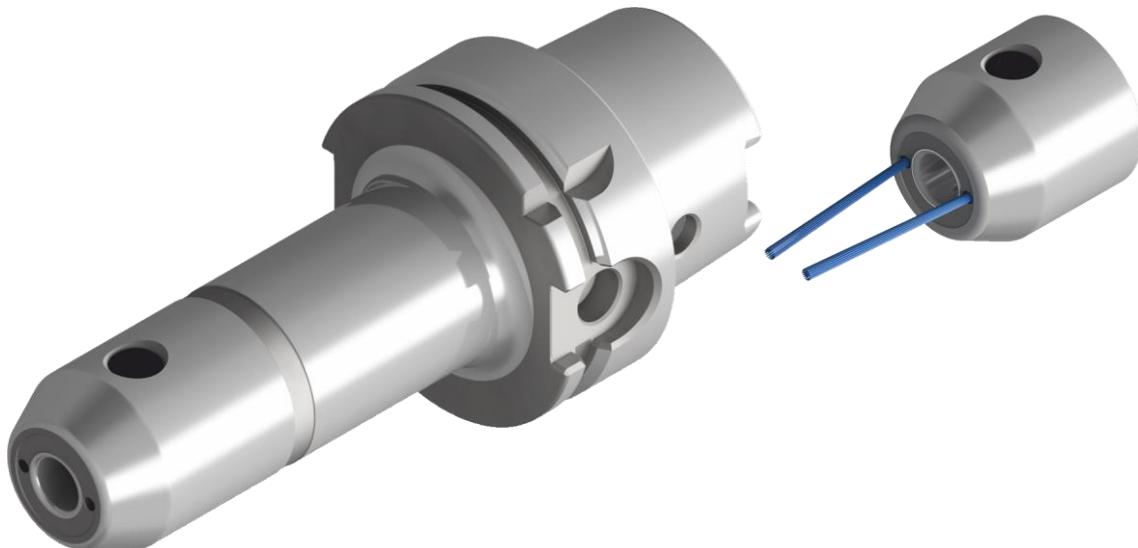

Figure: A = 160

Sealed Version

### Usage:

Ideally suited for use with tools that do not have an internal coolant supply and for machining in awkward locations with poor chip evacuation.

### Type:

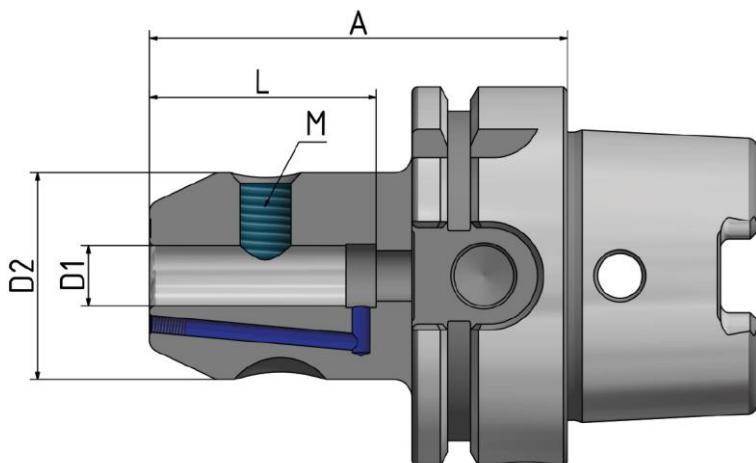

- Two holes in the wall of the Weldon holder direct the coolant to the cutting edge of the tool.
- Concentricity deviation of the taper to the inner taper  $\leq 0.003$  mm.
- Bore tolerance H4 (more accurate than DIN).

### Scope of delivery:

- Clamping screw
- 2 x M3 screws to close the «Cool Tool» holes if required

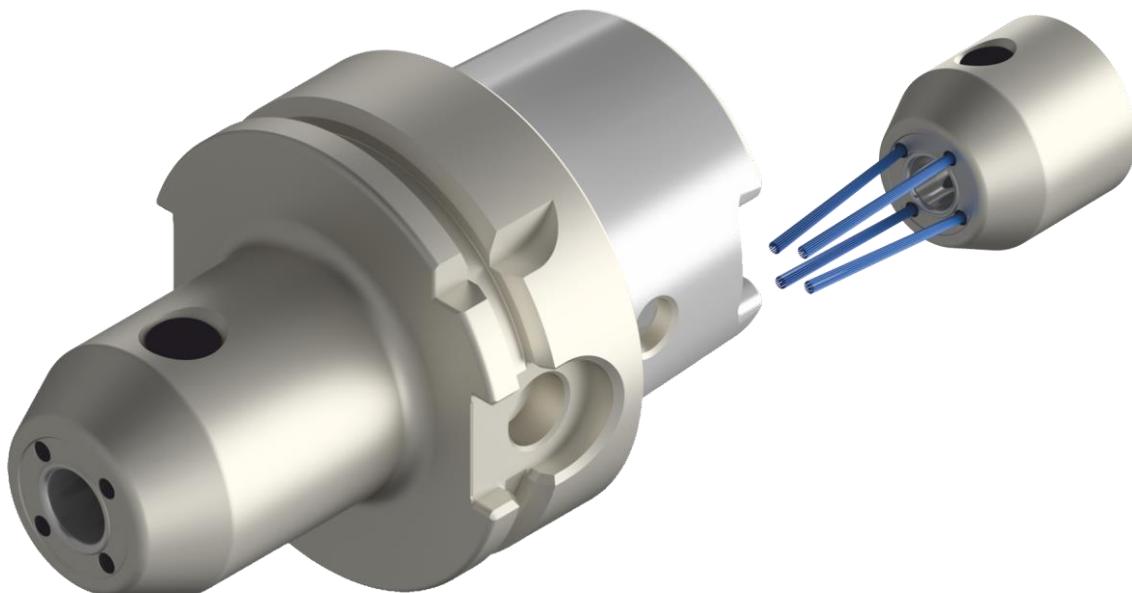

### Fine balanced:

## Endmill holder Weldon with 4 x «Cool Tool» – corrosion resistant

**Figure: A = 95**

**Sealed Version**

### **Usage:**

Ideally suited for use with tools that do not have an internal coolant supply and for machining in awkward locations with poor chip evacuation.

### **Type:**

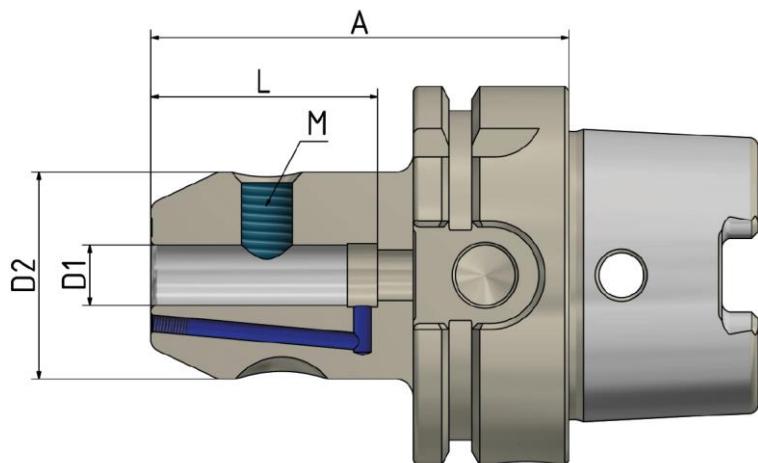

- The complete tool side of the holder is protected against corrosion.
- Concentricity deviation of the taper to D1  $\leq 0.003$  mm.
- Bore tolerance H4 (more accurate than DIN).
- Four holes in the wall of the Weldon holder direct the coolant to the cutting edge of the tool.

### **Scope of delivery:**

- Clamping screw
- 4 x M3 screws to close the «Cool Tool» holes if required

## Shrink fit holder 4.5°

**Figure: A = 160**

### Usage:

For clamping tools with cylindrical shank made of carbide or HSS. The shank tolerance is h6.

### Type:

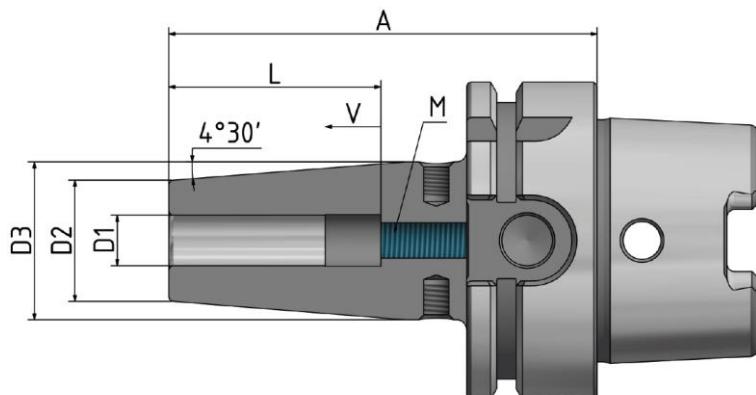

- Made of special heat-resistant steel.
- Suitable for inductive shrink fit devices.
- Concentricity deviation of the taper to D1 ≤ 0.003 mm.
- With four additional threads on the circumference for subsequent fine balancing.

### Scope of delivery:

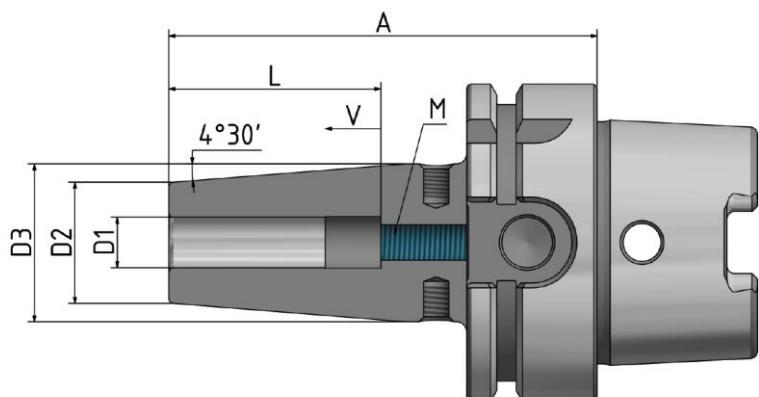

- Built-in length adjustment screw

### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance ≤ 1 gmm

## Shrink fit holder 4.5° «Cool Tool»

**Figure: A = 95**

**Sealed Version**

### Usage:

Ideally suited for use with tools that do not have an internal coolant supply and for machining in awkward locations with poor chip evacuation.

### Type:

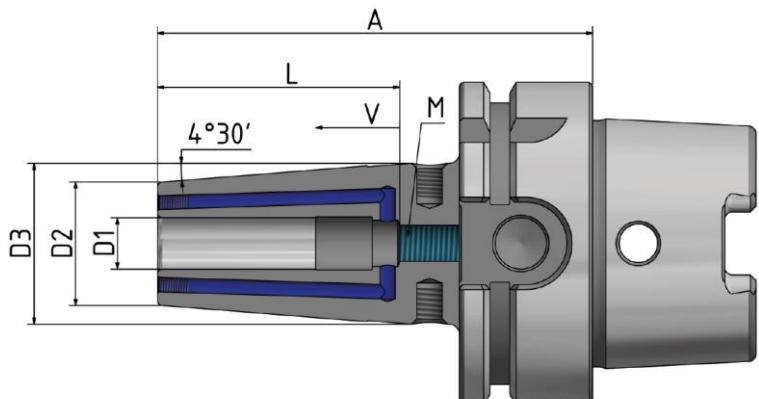

- Made of special heat-resistant steel.
- Suitable for inductive shrink fit devices.
- Concentricity deviation of the taper to D1 ≤ 0.003 mm.
- With four additional threads on the circumference for subsequent fine balancing.
- Two holes in the wall of the shrink fit chuck direct the coolant to the cutting edge of the tool.

### Scope of delivery:

- Built-in length adjustment screw
- 2 x M3 screws to close the «Cool Tool» hole if required.

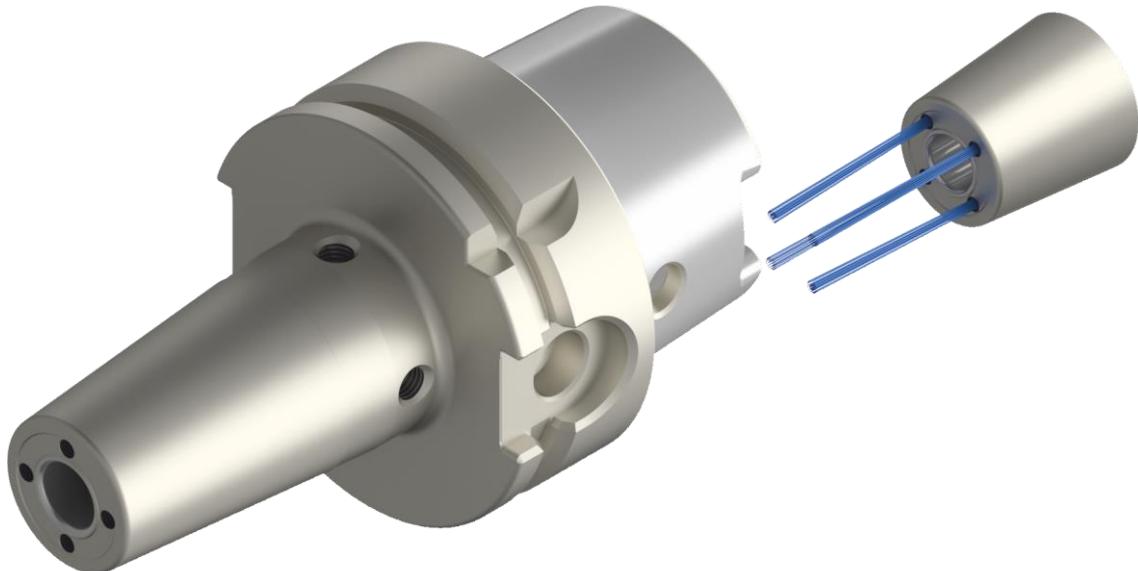

### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance ≤ 1 gmm

## Shrink fit holder 4.5° with 4 x «Cool Tool» – corrosion resistant

**corrosion protected**

**Sealed Version**

### **Usage:**

For clamping tools with cylindrical shank made of carbide or HSS. The shank tolerance is h6.

### **Type:**

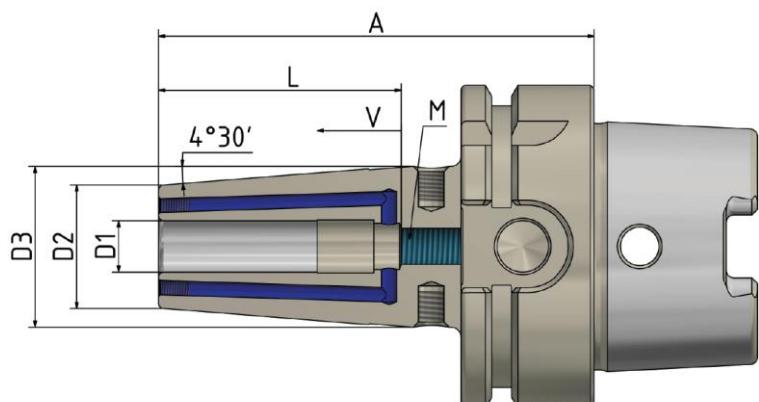

- Made of special heat-resistant steel.
- Suitable for inductive shrink fit devices.
- The tool side of the holder is protected against corrosion.
- With four additional threads on the circumference for subsequent fine balancing.
- Concentricity deviation of the taper to D1 ≤ 0.003 mm.
- Four holes in the wall of the shrink fit chuck direct the coolant to the cutting edge of the tool.

### **Scope of delivery:**

- Built-in length adjustment screw
- 4 x M3 screws for closing the «Cool Tool» holes, if required

### **Fine balanced:**

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance ≤ 1 gmm

## ER-Collet chuck

Figure: E 32 / A = 80

Sealed Version

### Usage:

For clamping tools with cylindrical shank in ER collets.

### Type:

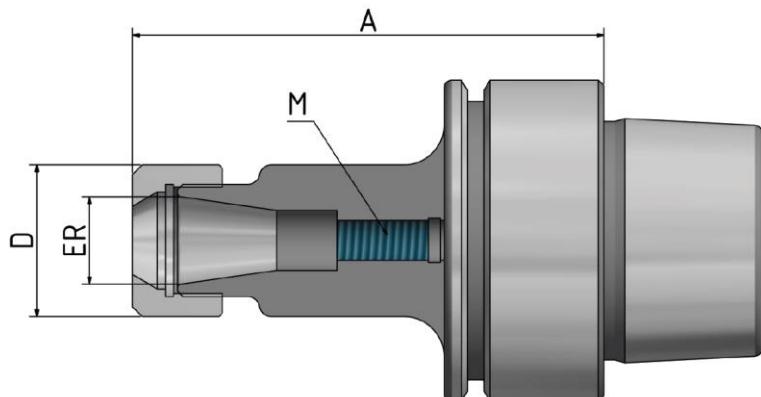

- Concentricity deviation of the taper to the inner taper  $\leq 0.003$  mm.
- Precisely matched taper tolerances of the ER inner taper and the collet taper achieve a concentricity of  $\leq 8 \mu$  at  $2.5 \times D$  unclamping length.

### Scope of delivery:

- Clamping nut

### Fine balanced:

G 2.5 at  $25000 \text{ min}^{-1}$  or max. residual unbalance  $\leq 1 \text{ gmm}$

## Shrink fit holder 4.5°

**Figure: E 32 / A = 70**

### Usage:

For clamping tools with cylindrical shank made of carbide or HSS. The shank tolerance is h6.

### Type:

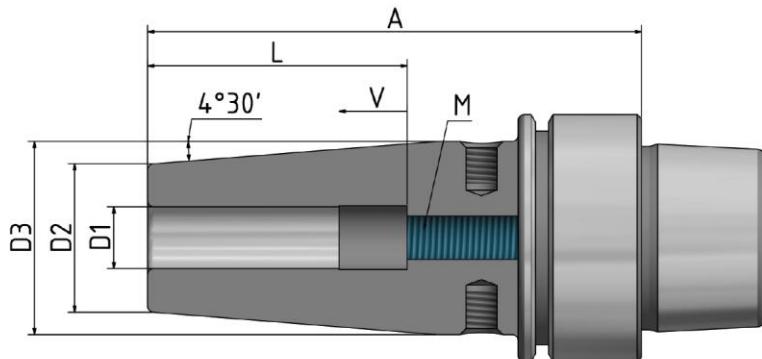

- Made of special heat-resistant steel.
- Suitable for inductive shrink fit devices.
- Concentricity deviation of the taper to D1 ≤ 0.003 mm.
- With four additional threads on the circumference for subsequent fine balancing.

### Scope of delivery:

- Built-in length adjustment screw

### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance ≤ 1 gmm

## HPC Precision ER Collet Chuck HAWK EYE® / ER «Mini»

**Figure: A = 160**

**Sealed Version**

### **Usage:**

For clamping tools with cylindrical shank in ER collets.

### **Type:**

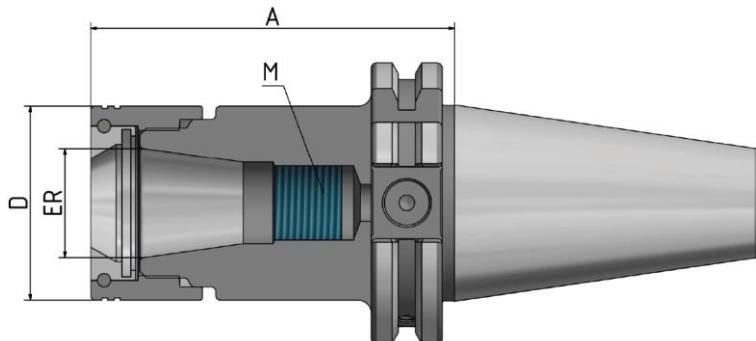

Highly accurate taper tolerances of the ER inner taper and the collet taper achieve a runout accuracy of  $\leq 3 \mu$  at 2.5 D chucking length - when using our  $2 \mu$  collets. Due to the deep seat of the collet, the use of a ball bearing, and coated collet nut; the HAWK EYE collet chuck achieves more than twice the holding force compared to standard ER tool holders. In addition, the reinforced chuck body contributes to significantly higher radial rigidity. HAWK EYE can only clamp tool shanks with the nominal diameter of the collet.

### **Scope of delivery:**

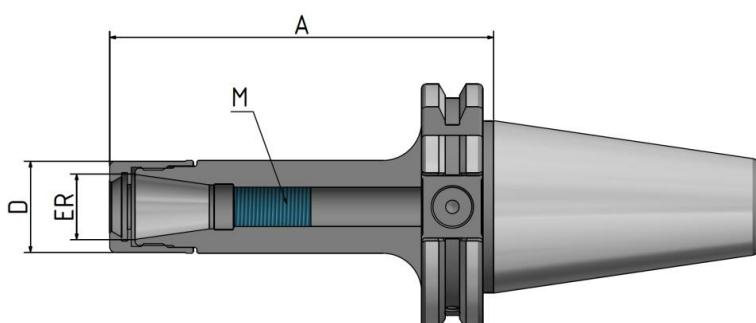

- Round clamping nut

### **Fine balanced:**

G 2.5 at  $25000^{\text{min-1}}$  or max. residual unbalance  $\leq 1 \text{ gmm}$

## Endmill holder Weldon with 4 x «Cool Tool» - corrosion resistant

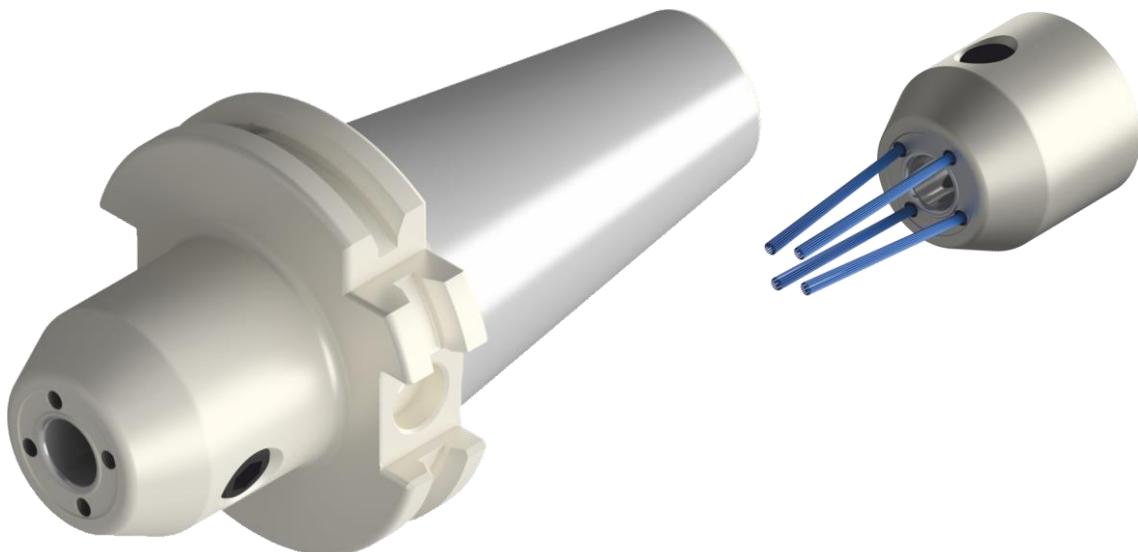

Figure: A = 63

Sealed Version

### Usage:

Ideally suited for use with tools that do not have an internal coolant supply and for machining in awkward locations with poor chip evacuation.

### Type:

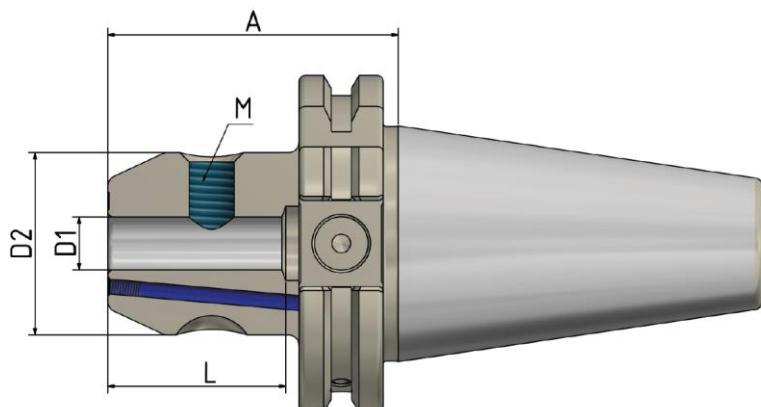

- The complete tool side of the holder is protected against corrosion.
- Four holes in the wall of the Weldon holder direct the coolant to the cutting edge of the tool.
- Concentricity deviation of the taper to D1 ≤ 0.003 mm.
- Bore tolerance H4 (more accurate than DIN).

### Scope of delivery:

- Clamping screw
- 4 x M3 screws to close the «Cool Tool» holes if required

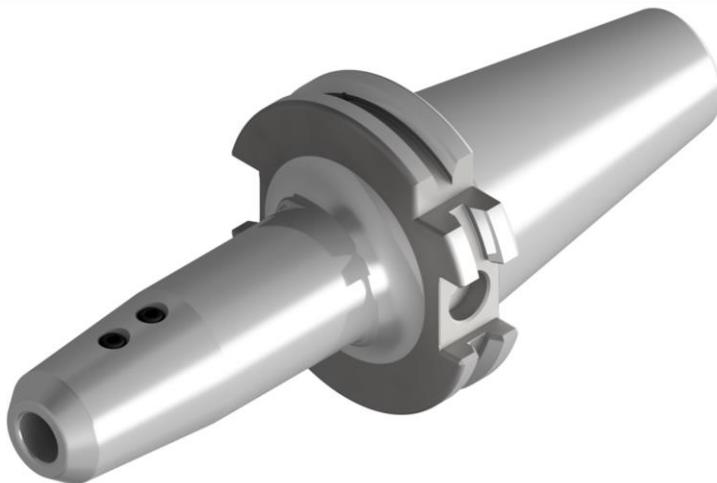

### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance ≤ 1 gmm

## Endmill holder Weldon - slim, extended version

**Figure: A = 100**

### **Usage:**

Combined design for clamping tools with straight shank according to DIN 1835B/6359HB and DIN 1835E/6359HE.

### **Type:**

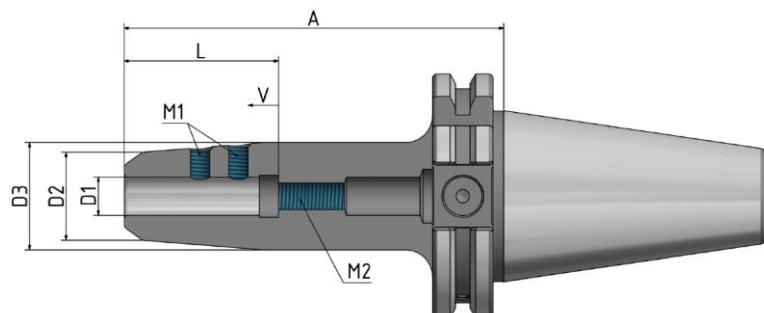

- Concentricity deviation of the taper to D1 ≤ 0.003 mm.
- Bore tolerance H4 (more accurate than DIN).

### **Scope of delivery:**

- Special clamping screw (with ball head)
- Cannulated length adjustment screw

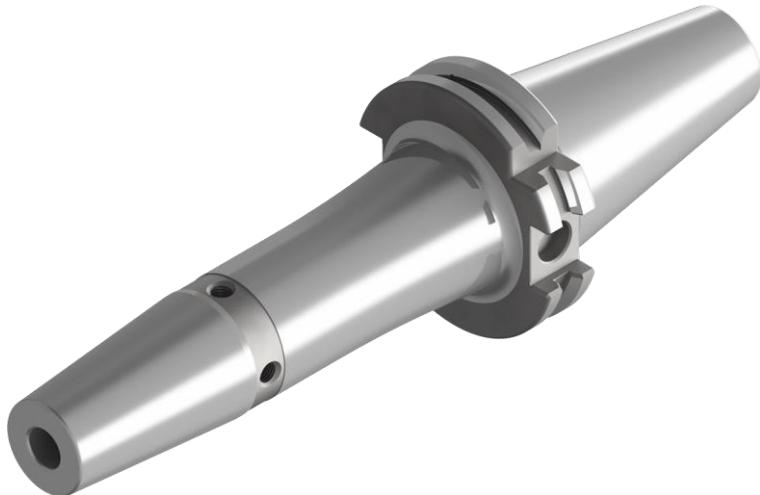

### **Fine balanced:**

## Shrink fit holder 4.5°

**Figure: A = 160**

### Usage:

For clamping tools with cylindrical shank made of carbide or HSS. The shank tolerance is h6.

### Type:

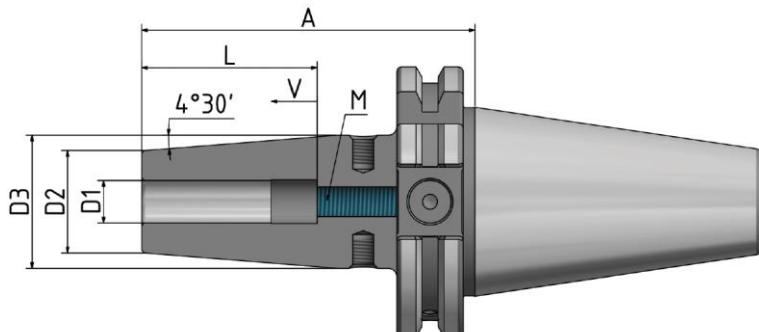

- Made of special heat-resistant steel.
- Suitable for inductive shrink fit devices.
- Concentricity deviation of the taper to D1 ≤ 0.003 mm.
- With four additional threads on the circumference for subsequent fine balancing.

### Scope of delivery:

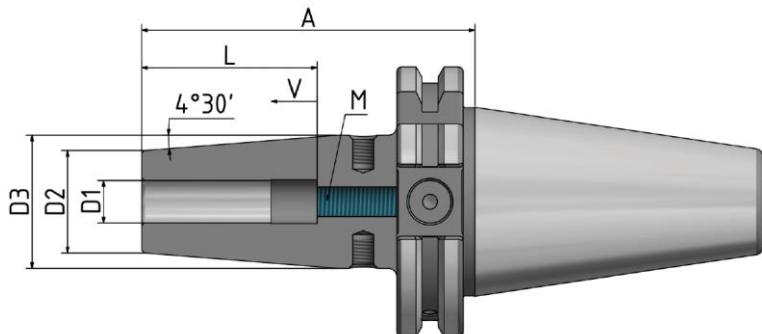

- Built-in length adjustment screw

### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance ≤ 1 gmm

1) «Cool Tool» hole not resealable

## Shrink fit holder 4.5° - slim / «Cool Tool» version

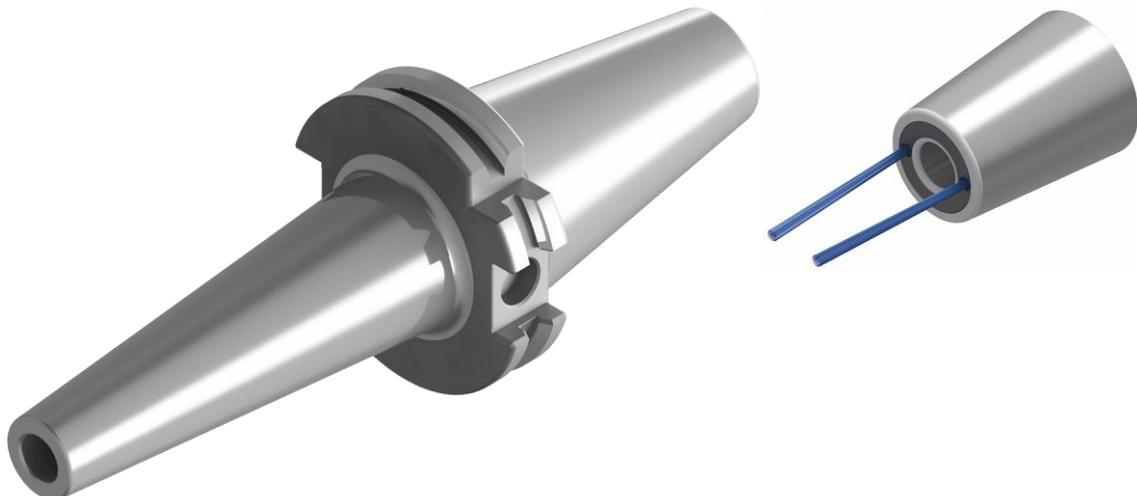

Figure: A = 120

Sealed Version

### Usage:

For clamping tools with cylindrical shank made of carbide or HSS. The shank tolerance is h6.

### Type:

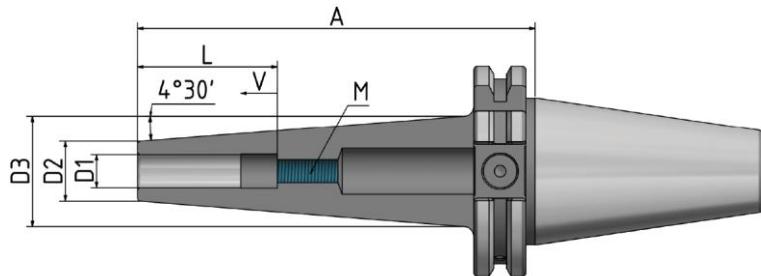

- Made of special heat-resistant steel.
- Suitable for inductive shrink fit devices.
- Concentricity deviation of the taper to D1 ≤ 0.003 mm.

### Scope of delivery:

- Built-in length adjustment screw

### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance ≤ 1 gmm

## Shrink fit holder 4.5° with 4 x «Cool Tool» - corrosion resistant

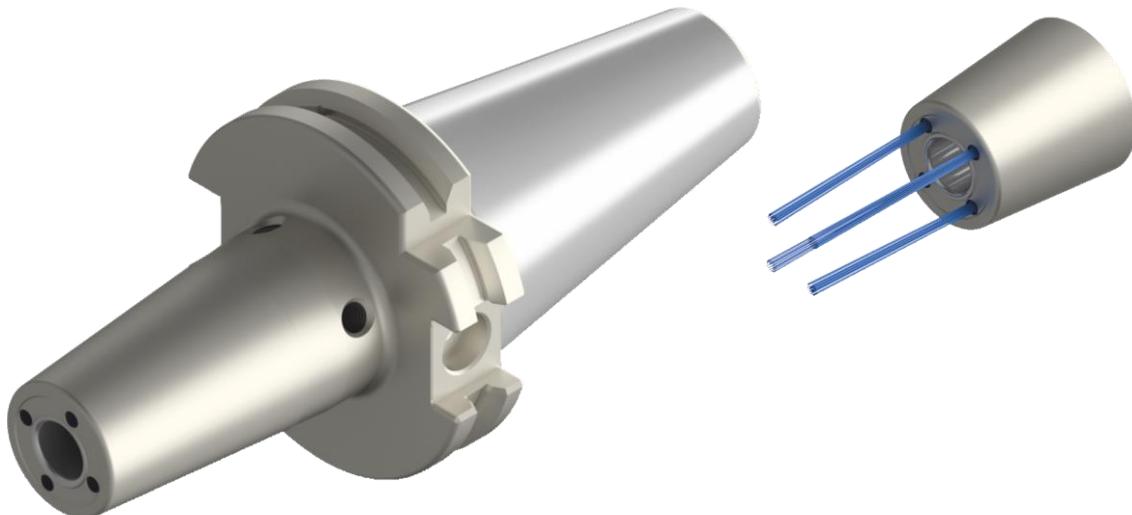

Figure: A = 80

Sealed Version

### Usage:

Ideally suited for use with tools that do not have an internal coolant supply and for machining in awkward locations with poor chip evacuation.

### Type:

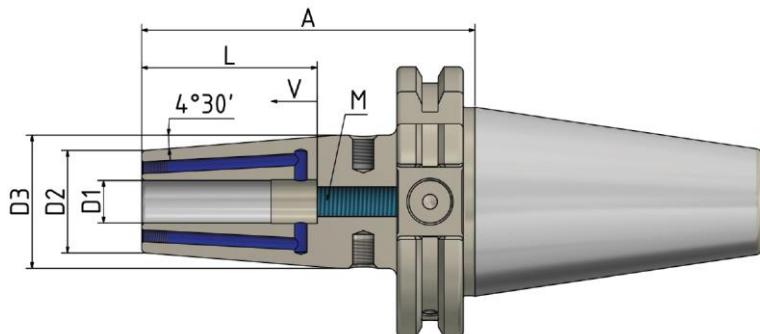

- Made of special heat-resistant steel.
- Suitable for inductive shrink fit devices.
- The complete tool side of the holder is protected against corrosion.
- Concentricity deviation of the taper to D1 ≤ 0.003 mm.
- With four additional threads on the circumference for subsequent fine balancing.
- Four holes in the wall of the shrink fit chuck direct the coolant to the cutting edge of the tool.

### Scope of delivery:

- Built-in length adjustment screw
- 4 x M3 screws to close the «Cool Tool» holes if required.

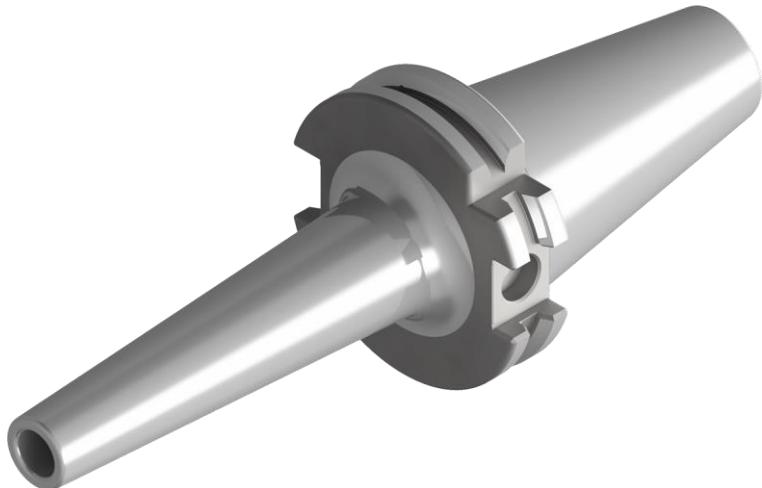

### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance ≤ 1 gmm

## ER-Collet chuck

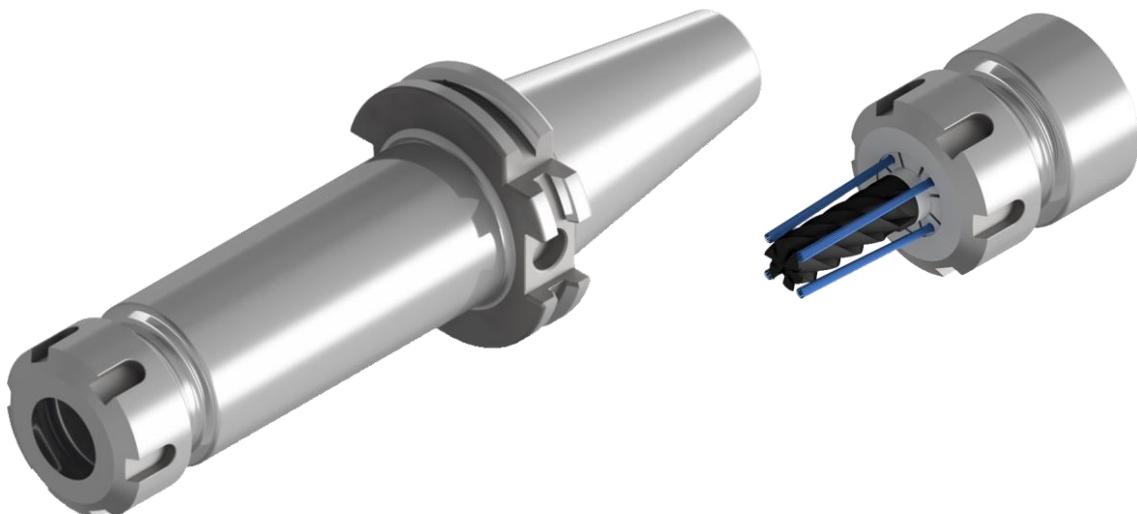

Figure: A = 160

Sealed Version

### Usage:

For clamping tools with cylindrical shank in ER collets.

### Type:

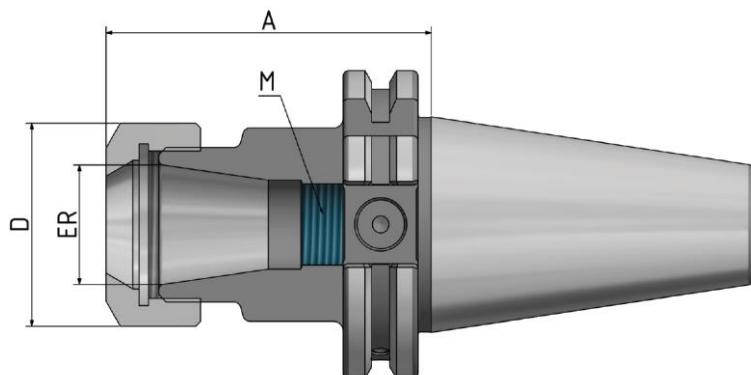

- Concentricity deviation of the taper to the inner taper  $\leq 0.003$  mm.
- Precisely matched taper tolerances of the ER inner taper and the collet taper achieve a concentricity of  $\leq 8 \mu$  at  $2.5 \times D$  unclamping length.

### Scope of delivery:

- Clamping nut

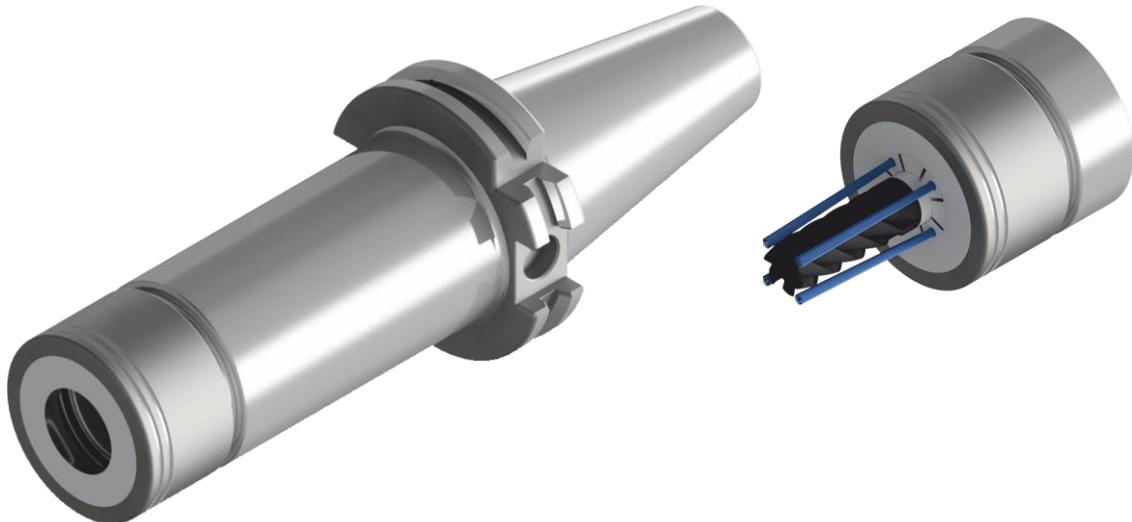

### Fine balanced:

## HPC Precision ER Collet Chuck HAWK EYE®

**Figure: A = 160**

**Sealed Version**

### **Usage:**

For clamping tools with cylindrical shank in ER collets.

### **Type:**

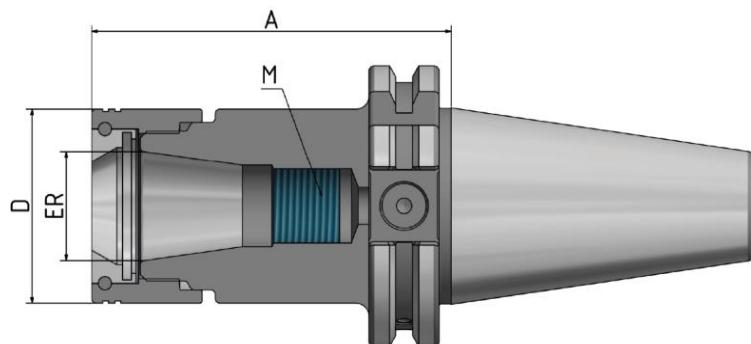

Highly accurate taper tolerances of the ER inner taper and the collet taper achieve a runout accuracy of  $\leq 3 \mu$  at 2.5 D chucking length - when using our 2  $\mu$  collets. Due to the deep seat of the collet, the use of a ball bearing, and coated collet nut; the HAWK EYE collet chuck achieves more than twice the holding force compared to standard ER tool holders. In addition, the reinforced chuck body contributes to significantly higher radial rigidity. HAWK EYE can only clamp tool shanks with the nominal diameter of the collet.

### **Scope of delivery:**

- Round clamping nut

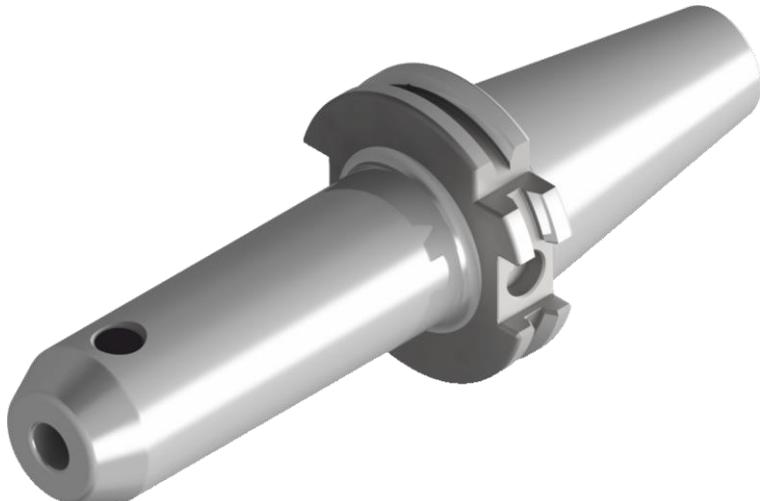

### **Fine balanced:**

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance  $\leq 1 \text{ gmm}$

## Endmill holder Weldon «Cool Tool»

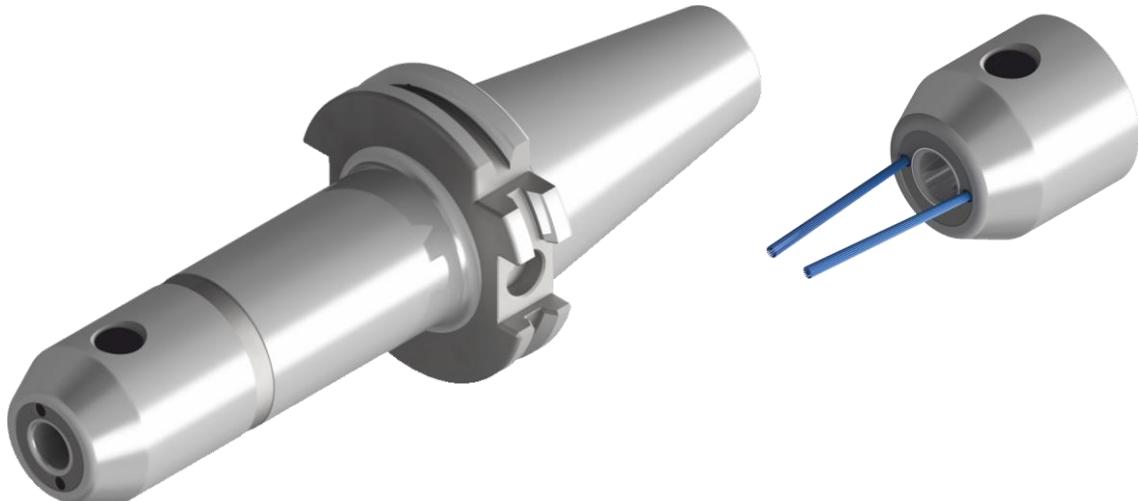

Figure: A = 100

Sealed Version

### Usage:

Ideally suited for use with tools that do not have an internal coolant supply and for machining in awkward locations with poor chip evacuation.

### Type:

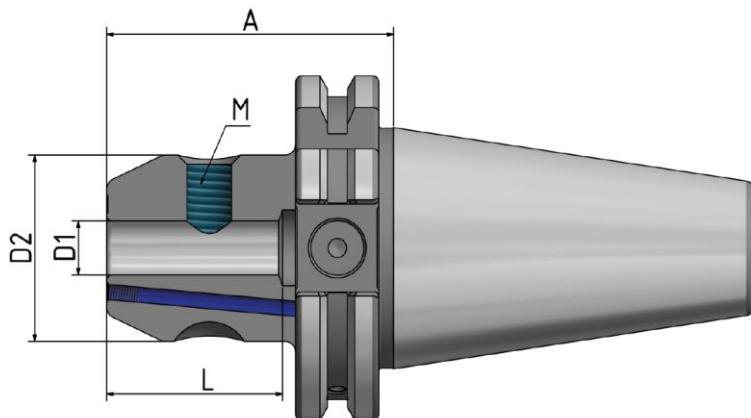

- Two holes in the wall of the Weldon holder direct the coolant to the cutting edge of the tool.

### Scope of delivery:

- Clamping screw
- 2 x M3 screws to close the «Cool Tool» holes if required

## Shrink fit holder 4.5°

**Figure: A = 160**

### Usage:

For clamping tools with cylindrical shank made of carbide or HSS. The shank tolerance is h6.

### Type:

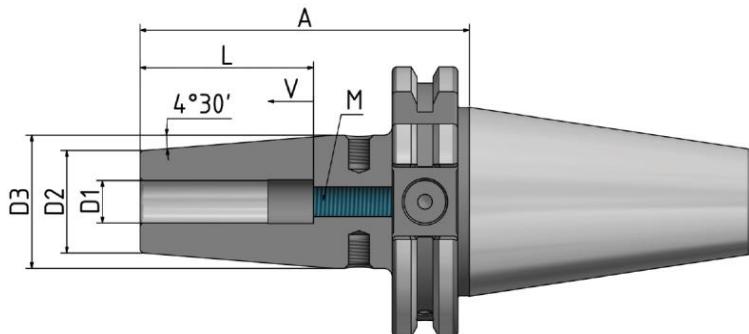

- Made of special heat-resistant steel.
- Suitable for inductive shrink fit devices.
- Concentricity deviation of the taper to D1 ≤ 0.003 mm.
- With four additional threads on the circumference for subsequent fine balancing.

### Scope of delivery:

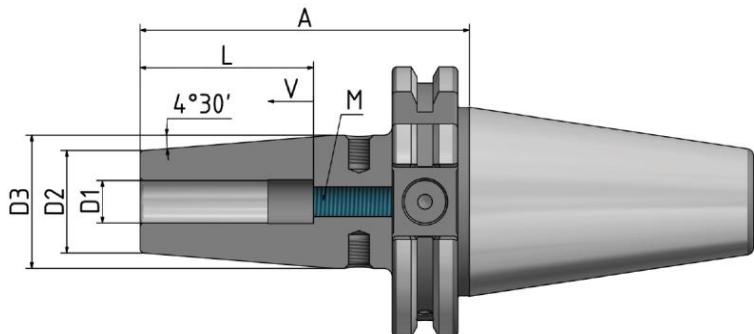

- Built-in length adjustment screw

### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance ≤ 1 gmm

## Shrink fit holder 4.5° «Cool Tool»

**Figure: A = 130**

**Sealed Version**

### Usage:

Ideally suited for use with tools that do not have an internal coolant supply and for machining in awkward locations with poor chip evacuation.

### Type:

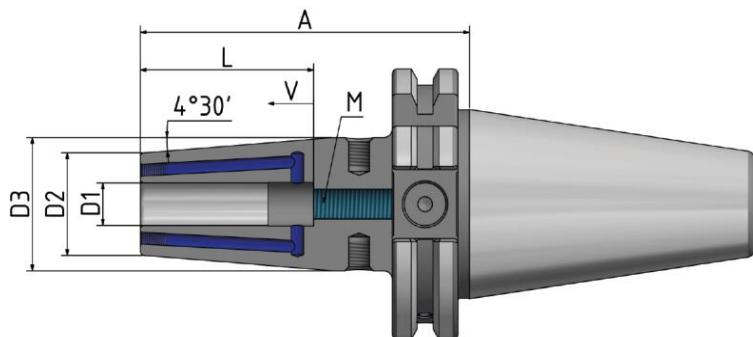

- Made of special heat-resistant steel.
- Suitable for inductive shrink fit devices.
- Concentricity deviation of the taper to D1 ≤ 0.003 mm.
- With four additional threads on the circumference for subsequent fine balancing.
- Two holes in the wall of the shrink fit chuck direct the coolant to the cutting edge of the tool.

### Scope of delivery:

- Built-in length adjustment screw
- 2 x M3 screws to close the «Cool Tool» hole if required.

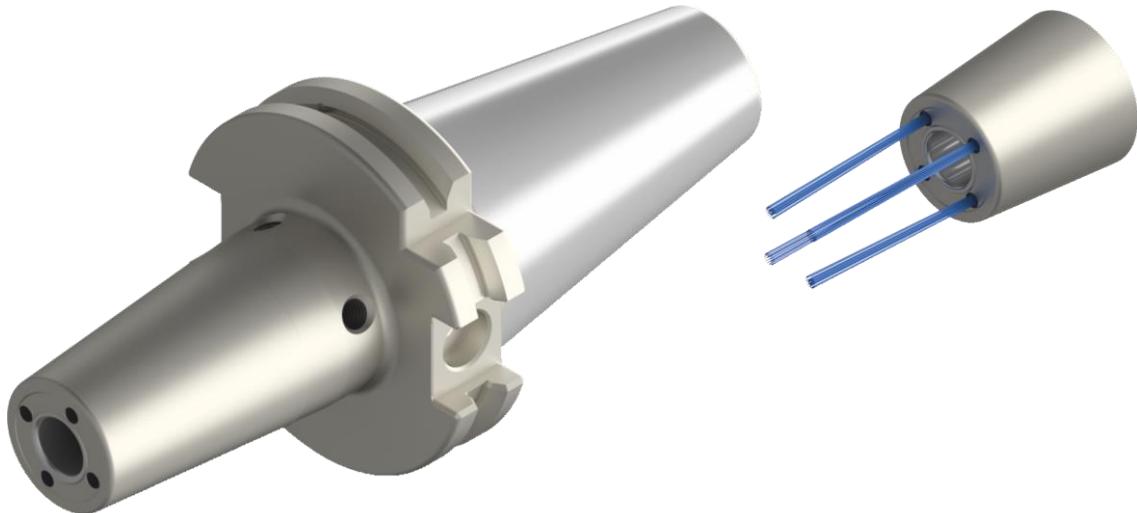

### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance ≤ 1 gmm

## Shrink fit holder 4.5° with 4 x «Cool Tool» - corrosion resistant

**Figure: A = 80**

**Sealed Version**

### Usage:

Ideally suited for use with tools that do not have an internal coolant supply and for machining in awkward locations with poor chip evacuation.

### Type:

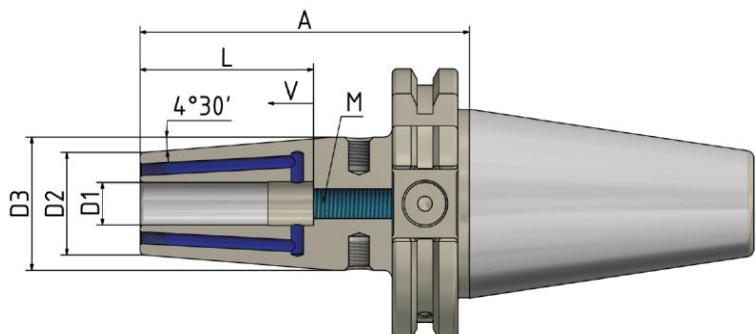

- Made of special heat-resistant steel.
- Suitable for inductive shrink fit devices.
- The complete tool side of the holder is protected against corrosion.
- Concentricity deviation of the taper to D1 ≤ 0.003 mm.
- With four additional threads on the circumference for subsequent fine balancing.
- Four holes in the wall of the shrink fit chuck direct the coolant to the cutting edge of the tool.

### Scope of delivery:

- Built-in length adjustment screw
- 4 x M3 screws to close the «Cool Tool» holes if required.

### Fine balanced:

## Shell mill holder «Cool Tool»

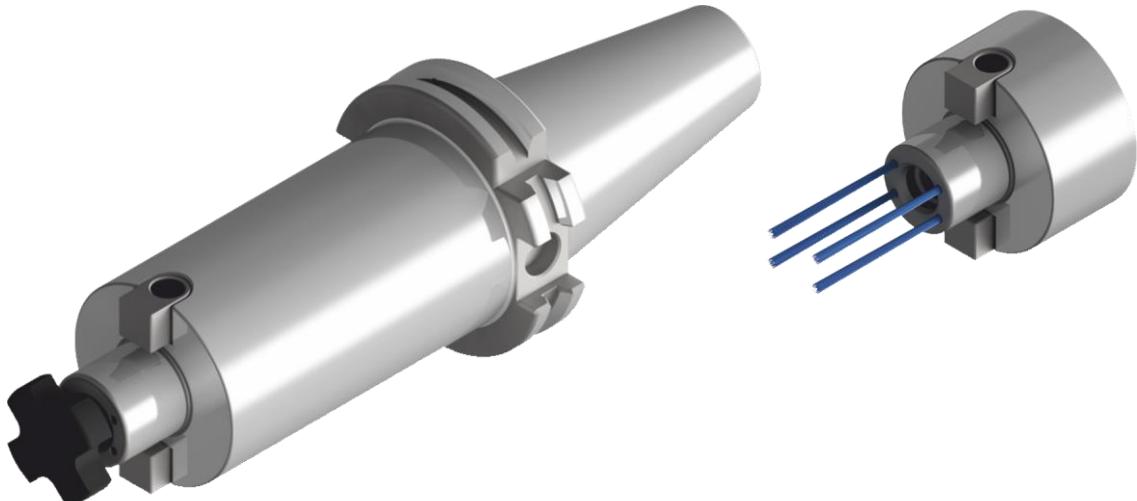

Figure: A = 160

Sealed Version

### Usage:

To accommodate milling cutters with transverse slots, with coolant supply to the cutting edges.

### Type:

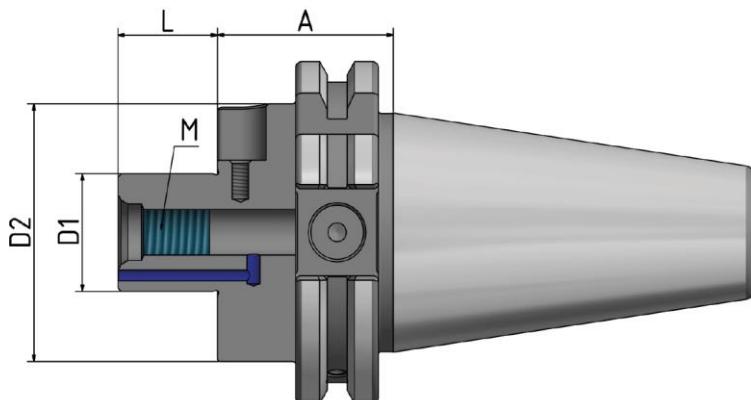

- Enlarged investment area.
- Concentricity deviation of the taper to D1  $\leq 0.006$  mm.

### Scope of delivery:

- Clamping screw
- Fixed driver keys

## HPC Precision ER Collet Chuck HAWK EYE® / ER «Mini»

**Figure: A = 160**

**Sealed Versions**

**Usage:**

For clamping tools with cylindrical shank in ER collets.

**Type:**

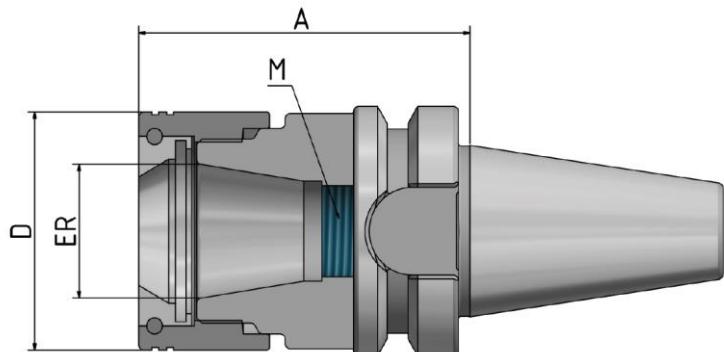

Highly accurate taper tolerances of the ER inner taper and the collet taper achieve a runout accuracy of  $\leq 3 \mu$  at 2.5 D chucking length - when using our 2  $\mu$  collets. Due to the deep seat of the collet, the use of a ball bearing, and coated collet nut; the HAWK EYE collet chuck achieves more than twice the holding force compared to standard ER tool holders. In addition, the reinforced chuck body contributes to significantly higher radial rigidity. HAWK EYE can only clamp tool shanks with the nominal diameter of the collet.

**Scope of delivery:**

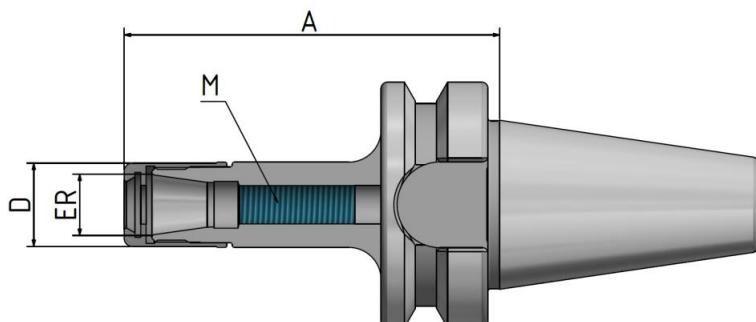

- Round clamping nut

**Fine balanced:**

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance  $\leq 1 \text{ gmm}$

## HPC Precision ER Collet Chuck HAWK EYE® / ER «Mini»

**Figure: A = 160**

**Sealed Versions**

**Usage:**

For clamping tools with cylindrical shank in ER collets

**Type:**

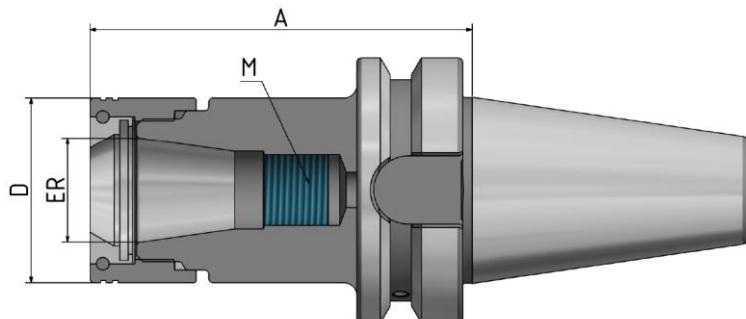

Highly accurate taper tolerances of the ER inner taper and the collet taper achieve a runout accuracy of  $\leq 3 \mu$  at 2.5 D chucking length - when using our  $2 \mu$  collets. Due to the deep seat of the collet, the use of a ball bearing, and coated collet nut; the HAWK EYE collet chuck achieves more than twice the holding force compared to standard ER tool holders. In addition, the reinforced chuck body contributes to significantly higher radial rigidity. HAWK EYE can only clamp tool shanks with the nominal diameter of the collet.

**Scope of delivery:**

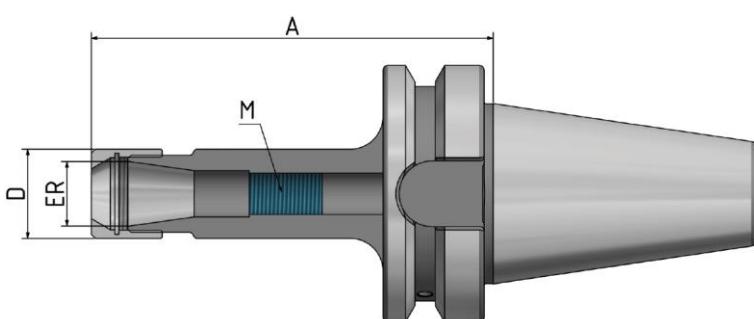

- Round clamping nut

**Fine balanced:**

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance  $\leq 1 \text{ gmm}$

## Shrink fit holder 4.5°

**Figure: A = 160**

### Usage:

For clamping tools with cylindrical shank made of carbide or HSS. Shank tolerance h6

### Type:

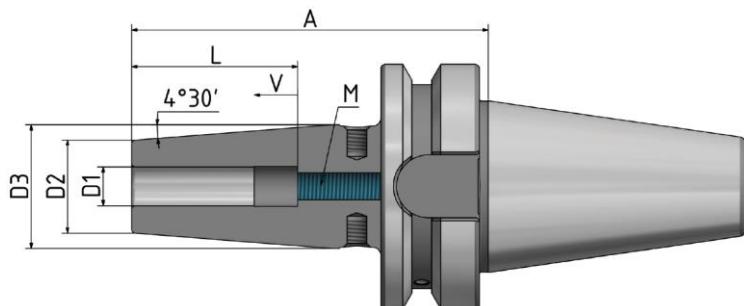

- Made of special heat-resistant steel.
- Suitable for inductive shrink fit devices.
- Concentricity deviation of the taper to D1 ≤ 0.003 mm.
- Four additional threads on the circumference for subsequent fine balancing.

### Scope of delivery:

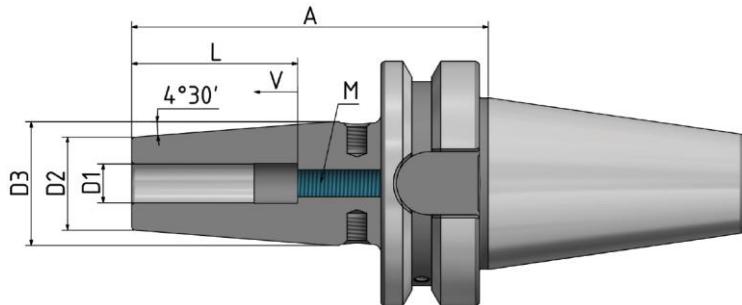

- Built-in length adjustment screw

### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance ≤ 1 gmm

## Shrink fit holder 4.5° «Cool Tool»

**Figure: A = 130**

**Sealed Versions**

### Usage:

Ideally suited for use with tools that do not have an internal coolant supply and for machining in awkward locations with poor chip evacuation.

### Type:

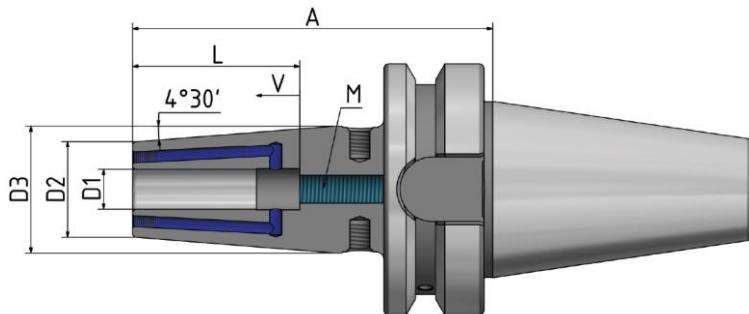

- Made of special heat-resistant steel.
- Suitable for inductive shrink fit devices.
- Concentricity deviation of the taper to D1 ≤ 0.003 mm.
- Four additional threads on the circumference for subsequent fine balancing.
- Two holes in the wall of the shrink fit chuck direct the coolant to the mold cutting edge

### Scope of delivery:

- Built-in length adjustment screw
- 2 x M3 screws to close the «Cool Tool» holes if required

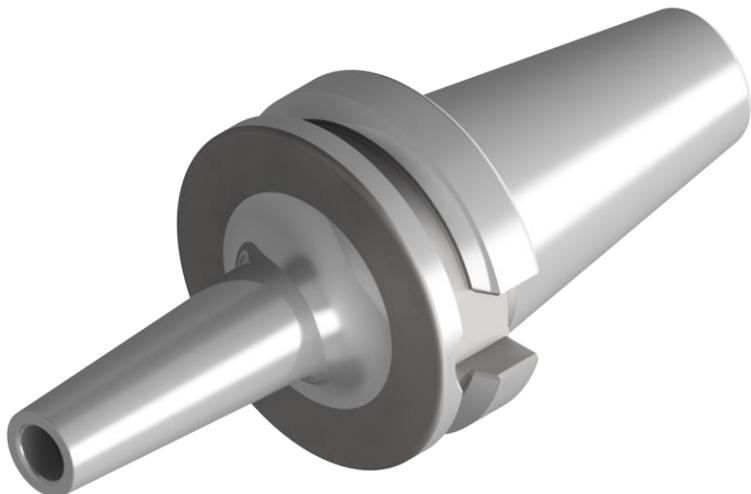

### Fine balanced:

G 2.5 at 25000 or<sup>min-1</sup> max. residual unbalance ≤ 1 gmm

## HPC Precision ER Collet Chuck HAWK EYE®.

**Figure: A = 160**

**Sealed Versions**

### **Usage:**

For clamping tools with cylindrical shank in ER collets.

### **Type:**

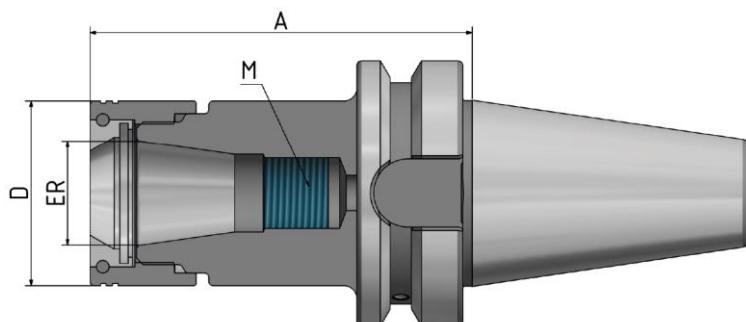

Highly accurate taper tolerances of the ER inner taper and the collet taper achieve a runout accuracy of  $\leq 3 \mu$  at 2.5 D chucking length - when using our 2  $\mu$  collets. Due to the deep seat of the collet, the use of a ball bearing, and coated collet nut; the HAWK EYE collet chuck achieves more than twice the holding force compared to standard ER tool holders. In addition, the reinforced chuck body contributes to significantly higher radial rigidity. HAWK EYE can only clamp tool shanks with the nominal diameter of the collet.

### **Scope of delivery:**

- Round clamping nut

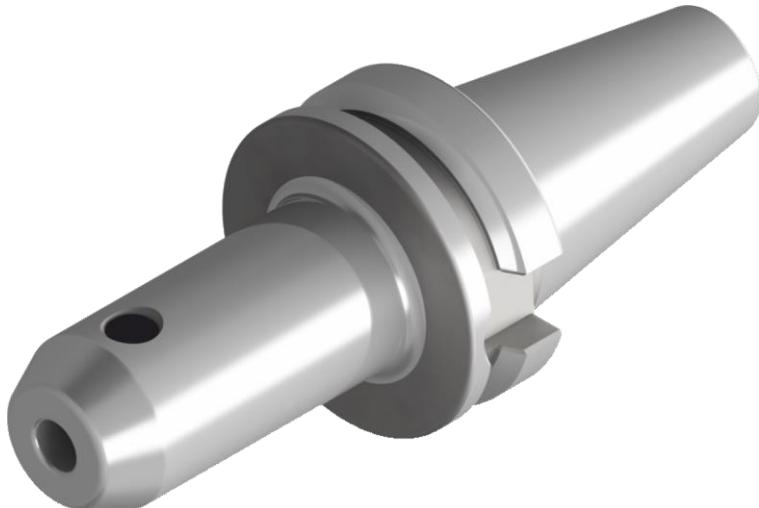

### **Fine balanced:**

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance  $\leq 1 \text{ gmm}$

## Endmill holder Weldon

**Figure: A = 80**

### Usage:

For clamping tools with straight shank according to DIN 1835B / 6359HB

### Type:

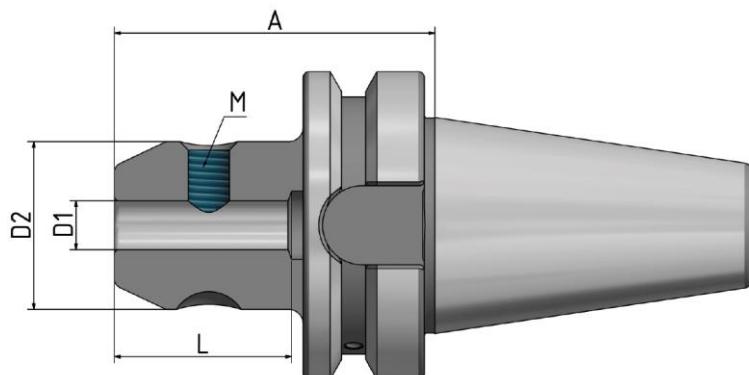

- Concentricity deviation of the taper to D1  $\leq 0.003$  mm.
- Bore tolerance H4 (more accurate than DIN)

### Scope of delivery:

- Clamping screw

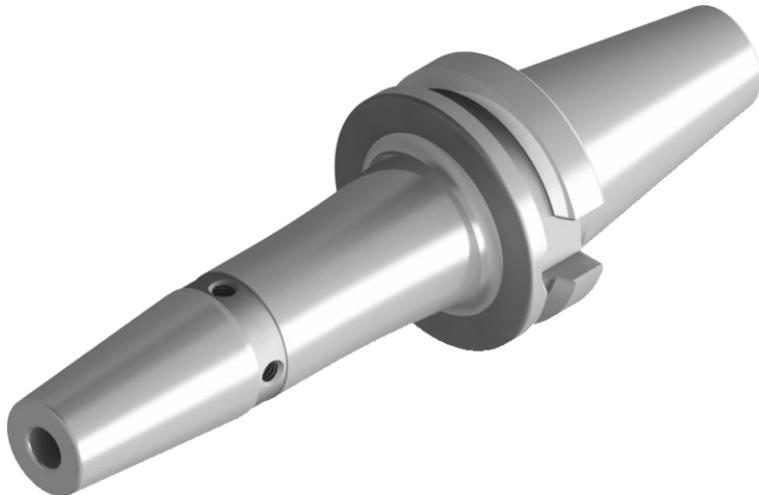

### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance  $\leq 1$  gmm

## Shrink fit holder 4.5°

**Figure: A = 200**

### Usage:

For clamping tools with cylindrical shank made of carbide or HSS. The shank tolerance is h6.

### Type:

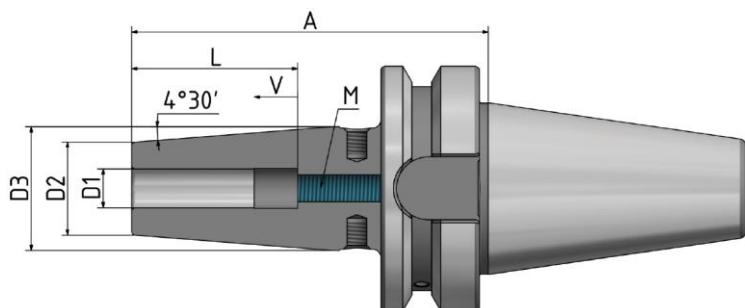

- Made of special heat-resistant steel.
- Suitable for inductive shrink fit devices.
- Concentricity deviation of the taper to  $D_1 \leq 0.003$  mm.
- With four additional threads on the circumference for subsequent fine balancing.

### Scope of delivery:

- Built-in length adjustment screw

### Fine balanced:

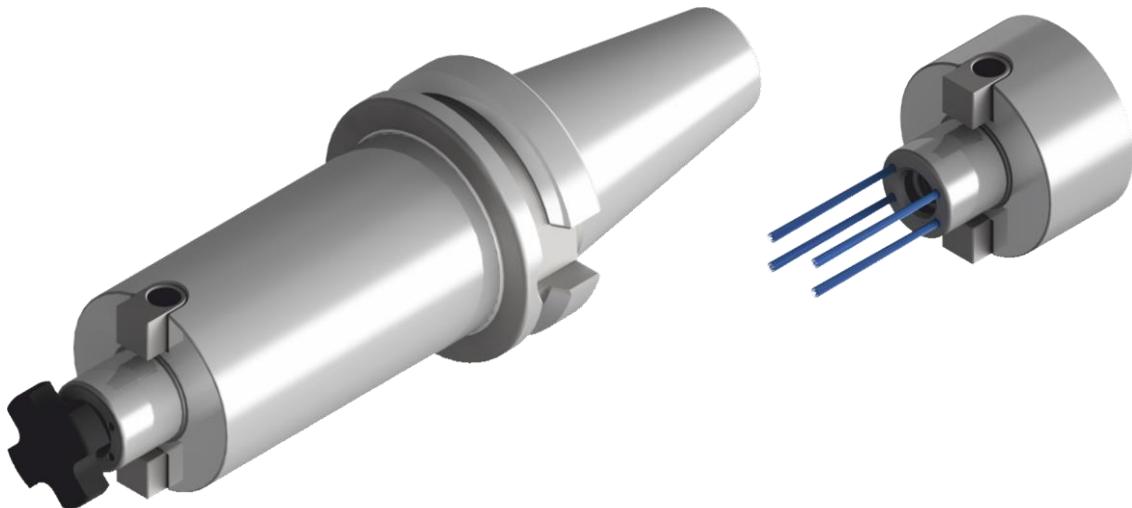

G 2.5 at  $25000 \text{ min}^{-1}$  or max. residual unbalance  $\leq 1 \text{ gmm}$

## Shell mill holder «Cool Tool»

**Figure: A = 100**

### Sealed Versions

#### Usage:

To accommodate milling cutters with transverse slots, with coolant supply to the cutting edges.

#### Type:

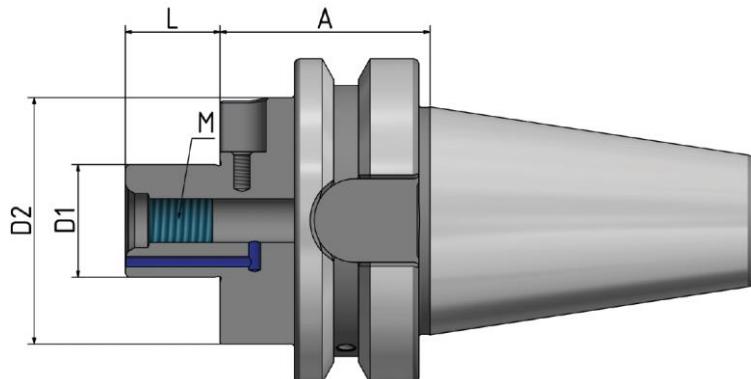

- With enlarged contact surface.
- Concentricity deviation of the taper to D1 ≤ 0.006 mm.

#### Scope of delivery:

- Clamping screw

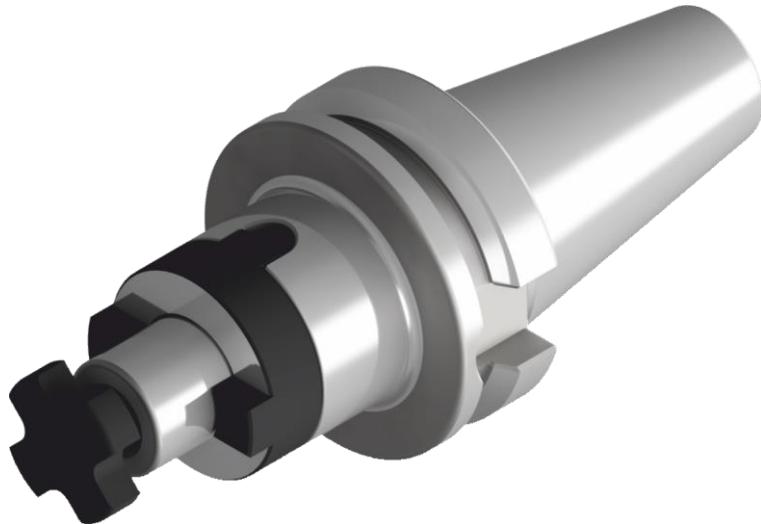

#### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance ≤ 1 gmm

## ER-Collet chuck - BT double contact - BTD

**Figure: A = 100**

**Sealed Versions**

### Usage:

For clamping tools with cylindrical shank in ER collets.

### Type:

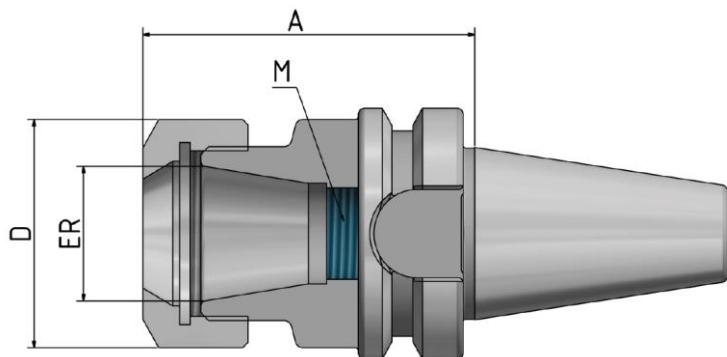

- Concentricity deviation of the taper to the inner taper  $\leq 0.003$  mm.
- Due to precisely matched taper tolerances of the ER inner taper and the collet taper, a concentricity of  $\leq 8 \mu$  at  $2.5 \times D$  unclamping length is achieved.

### Scope of delivery:

- Clamping nut

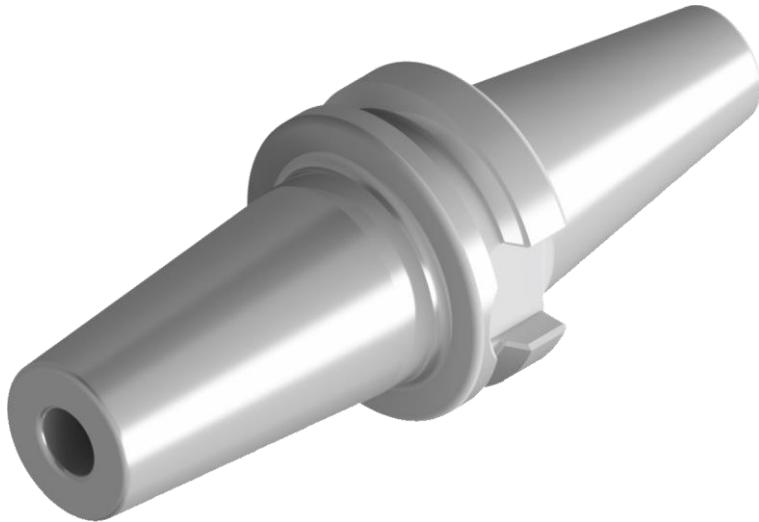

### Fine balanced:

G 2.5 at  $25000 \text{ min}^{-1}$  or max. residual unbalance  $\leq 1$  gmm

## HPC Precision ER Collet Chuck HAWK EYE®

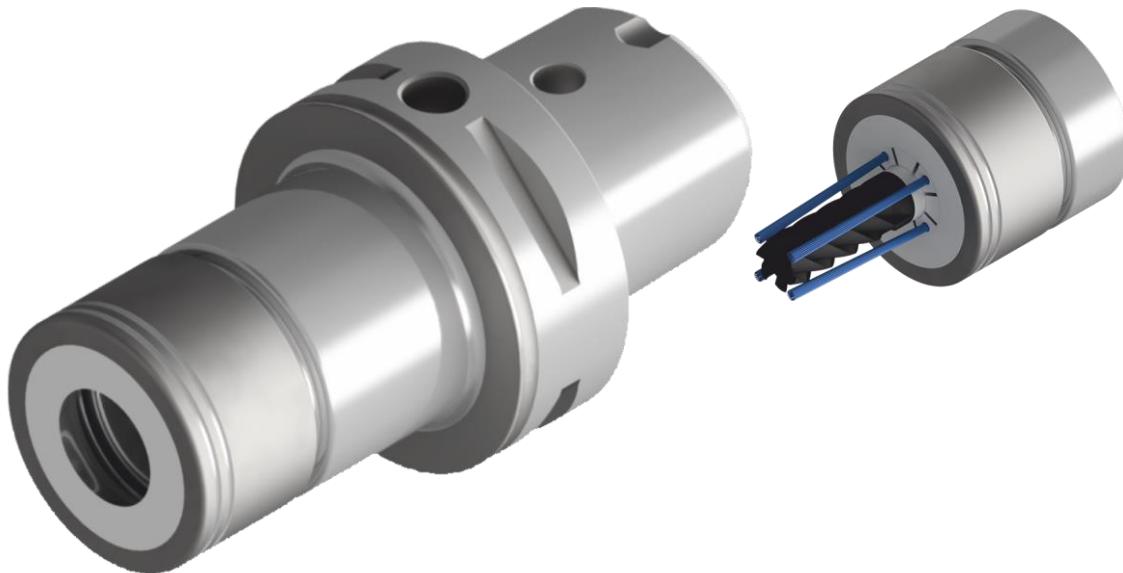

Figure: A = 100

Sealed Version

### Usage:

For clamping tools with cylindrical shank in ER collets.

### Type:

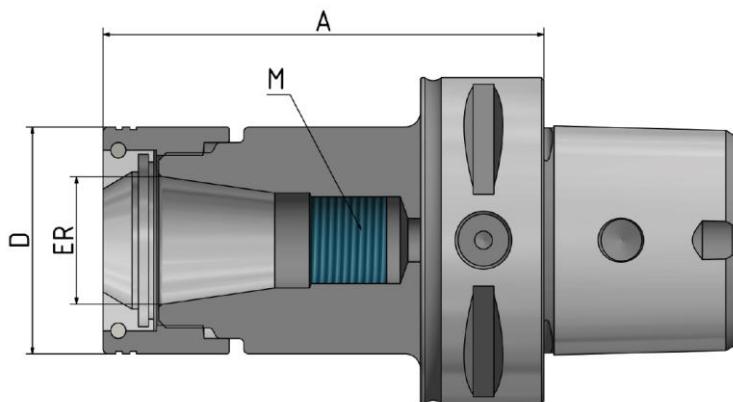

- Highly accurate taper tolerances of the ER inner taper and the collet taper achieve a runout accuracy of  $\leq 3 \mu$  at 2.5 D chucking length - when using our  $2 \mu$  collets. Due to the deep seat of the collet, the use of a ball bearing, and coated collet nut; the HAWK EYE collet chuck achieves more than twice the holding force compared to standard ER tool holders. In addition, the reinforced chuck body contributes to significantly higher radial rigidity. HAWK EYE can only clamp tool shanks with nominal collet diameter

### Scope of delivery:

- Round clamping nut

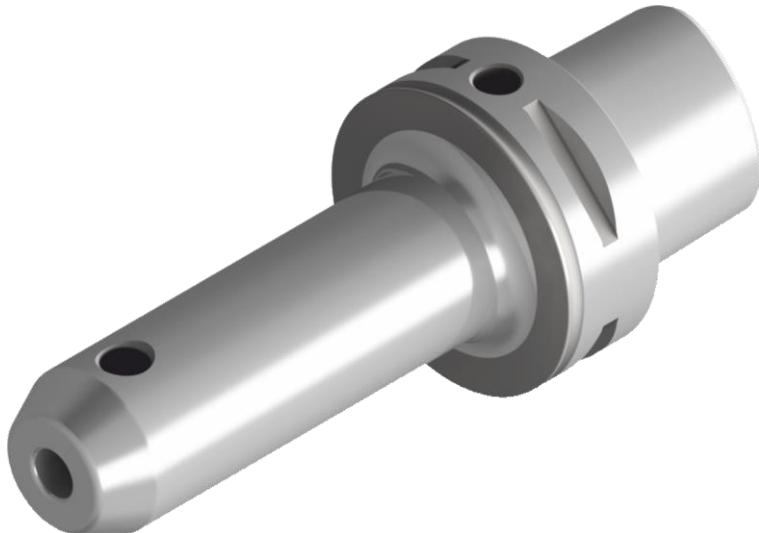

### Fine balanced:

G 2.5 at  $25000 \text{ min}^{-1}$  or max. residual unbalance  $\leq 1 \text{ gmm}$

## Endmill holder Weldon

**Figure: A = 100**

**Usage:**

For clamping tools with cylindrical shank according to DIN 1835B / 6359HB.

**Type:**

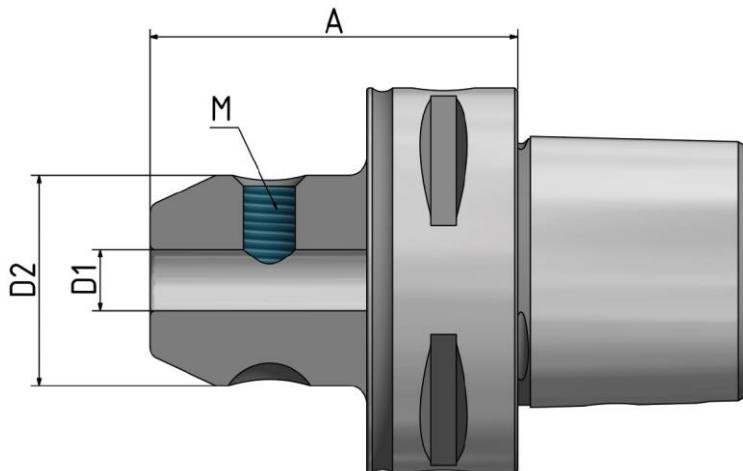

- Concentricity deviation of the taper to the D1 ≤ 0.003 mm.
- Bore tolerance H4 (more accurate than DIN).

**Scope of delivery:**

- Clamping screw

**Fine balanced:**

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance ≤ 1 gmm

## Endmill holder Weldon «Cool Tool»

**Figure: A = 100**

**Sealed Version**

### Usage:

Ideally suited for use with tools that do not have an internal coolant supply and for machining in awkward locations with poor chip evacuation.

### Type:

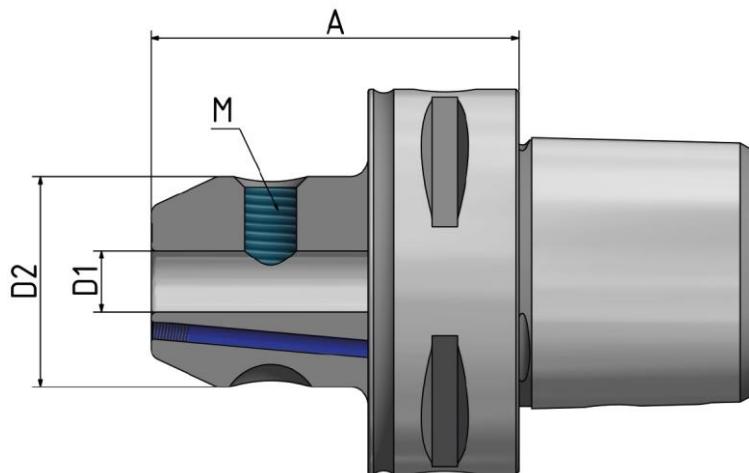

- Two holes in the wall of the Weldon holder direct the coolant to the cutting edge of the tool.
- Concentricity deviation of the taper to the D1  $\leq 0.003$  mm.
- Bore tolerance H4 (more accurate than DIN).

### Scope of delivery:

- Clamping screw
- 2 x M3 screws to close the «Cool Tool» holes if required

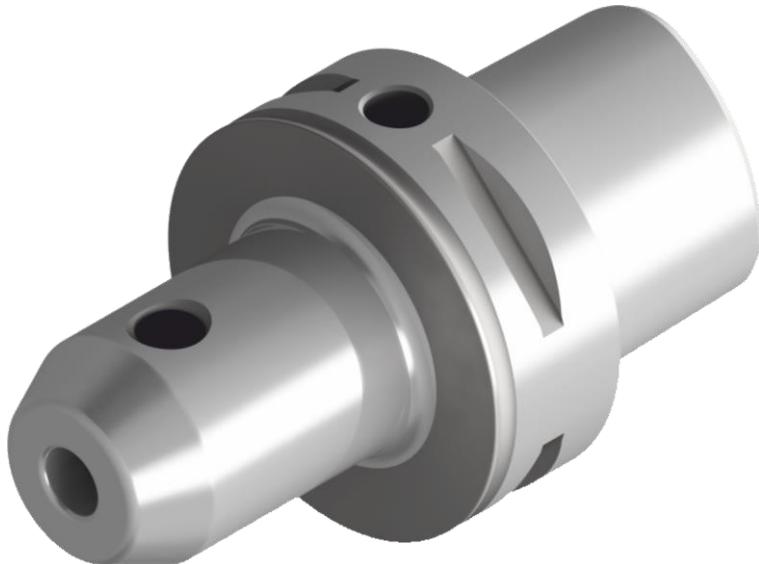

### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance  $\leq 1$  gmm

## Shrink fit holder 4.5°

**Figure: A = 100**

### Usage:

For clamping tools with cylindrical shank made of carbide or HSS. The shank tolerance is h6.

### Type:

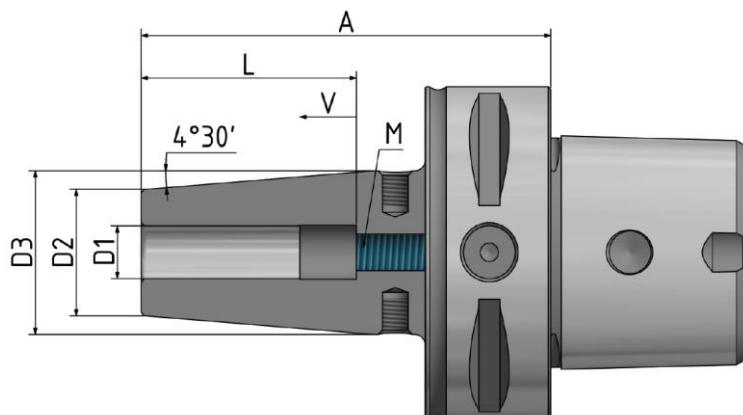

- Made of special heat-resistant steel.
- Suitable for inductive shrink fit devices.
- Concentricity deviation of the taper to D1 ≤ 0.003 mm.
- With four additional threads on the circumference for subsequent fine balancing.

### Scope of delivery:

- Built-in length adjustment screw

### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance ≤ 1 gmm

## Shell mill holder «Cool Tool»

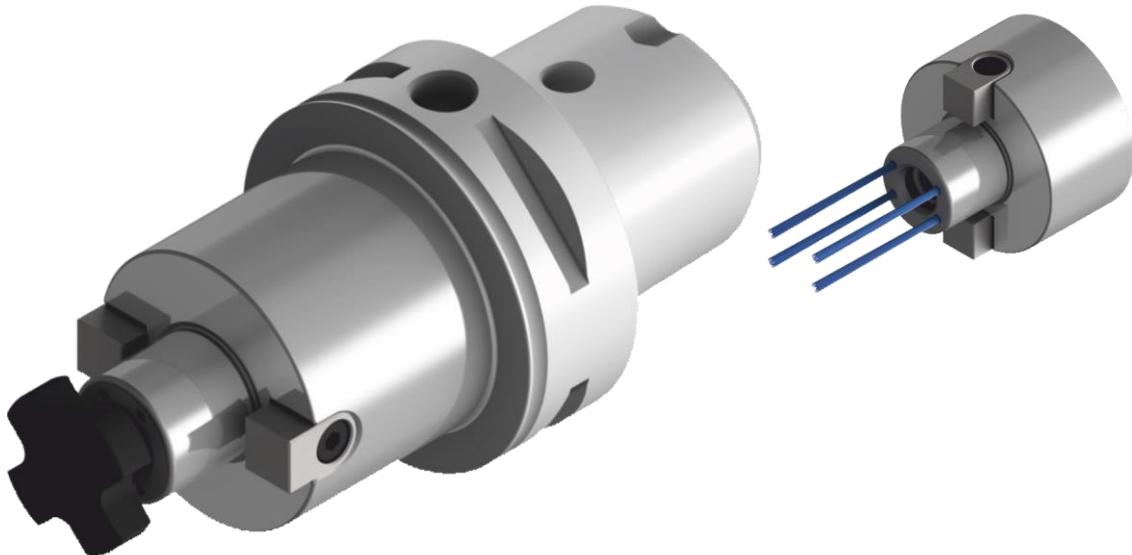

Figure: A = 40

Sealed Version

### Usage:

To accommodate milling cutters with transverse slot, with coolant supply to the cutting edges.

### Type:

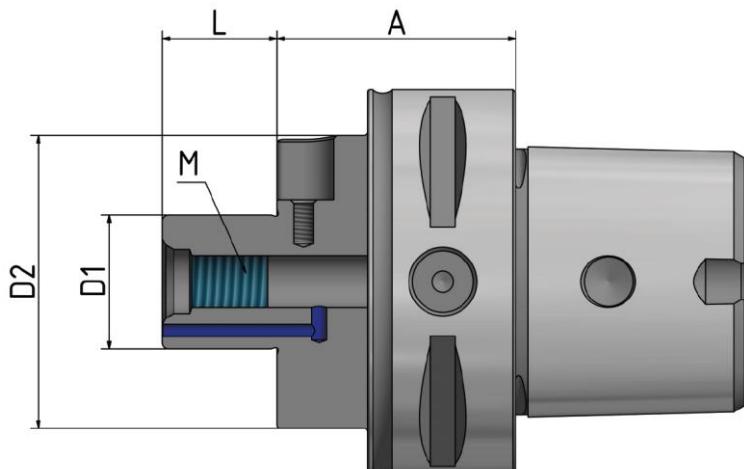

- Enlarged investment area.
- Concentricity deviation of the taper to D1 ≤ 0.006 mm.

### Scope of delivery:

- Clamping screw
- Fixed driver keys

### Fine balanced:

G 2.5 at 25000  $\text{min}^{-1}$  or max. residual unbalance ≤ 1 gmm

# ZOLLER marking solution

## »idChip«

### Usage:

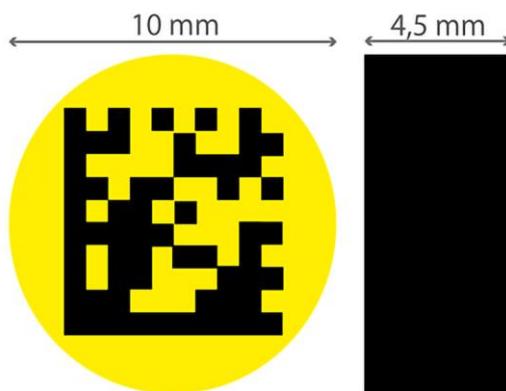

- For identifying a tool by reading the DataMatrix code via scanner. The inventory number on the chip can be assigned to a tool in the »pilot« image processing software or ZOLLER TMS Tool Management Solutions.

### Type:

- UV-resistant
- High abrasion resistance
- Resistance to oil lubricants and emulsion-based lubricants

### Scope of delivery:

- »idChip« in ZOLLER standard format (number of pieces freely selectable)

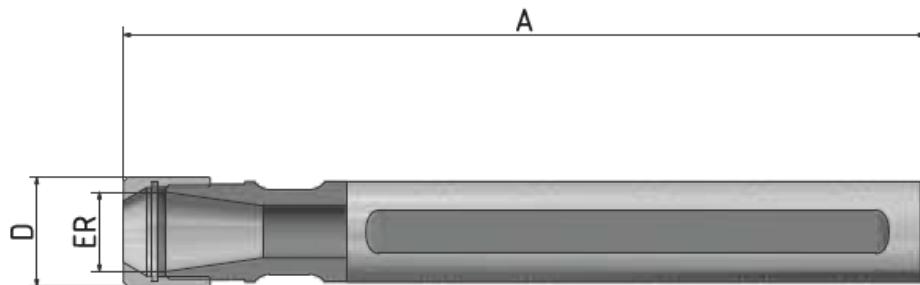

### Order no.

WZV1000-030

# Collet extensions

## Collet chuck extensions «Mini»

### Usage:

For the extension of tool holders. The cylindrical shank can be clamped in Weldon chuck or collet chuck.

### Type:

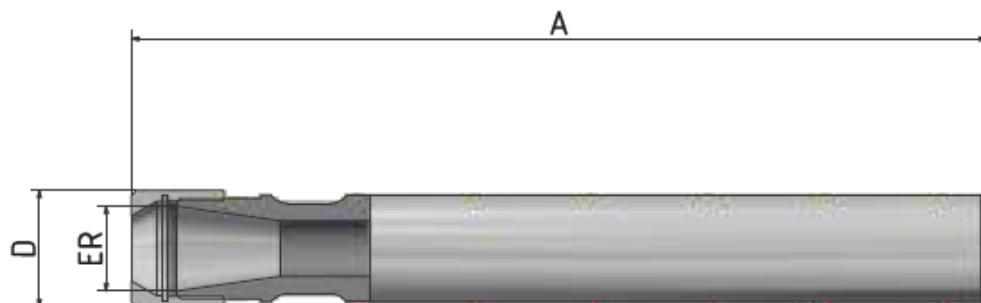

- Concentricity deviation of the inner taper to the shank  $D \leq 0.005$  mm.

### Scope of delivery:

- Clamping nut

## Collet extensions «Mini» - without clamping surface (cylindrical)

### Usage:

For the extension of tool holders.

### Type:

- Concentricity deviation of the inner taper to the shank  $D \leq 0.005$  mm.

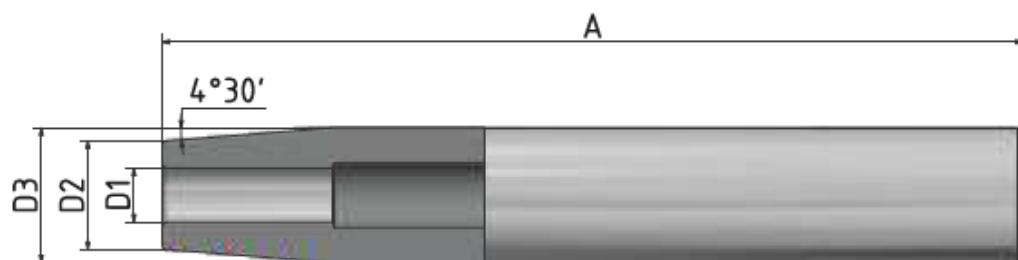

### Scope of delivery:

- Clamping nut

Order no.	ER	D	A

# Shrink fit extensions

## Shrink fit extensions without length adjustment screw

### Usage:

For the extension of tool holders. The cylindrical shank can be clamped in the shrink fit chuck or collet chuck.

### Type:

- Made of special, heat-resistant steel-
- Suitable for inductive shrink fit devices.
- Concentricity deviation of the inner taper to the shank  $D \leq 0.005$  mm.

### Scope of delivery:

- Clamping nut

## Collets ER, 5 $\mu$ repeat accuracy

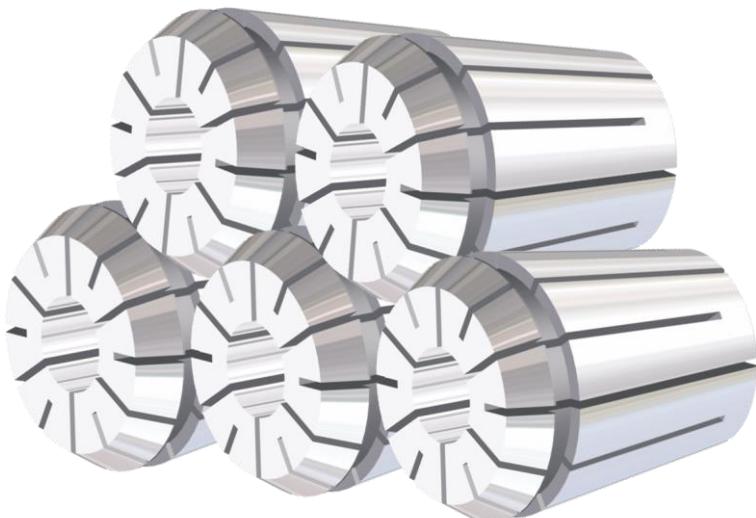

- High precision design with 5  $\mu$  concentricity and repeatability!
- All longitudinal edges deburred and additionally rounded. This protects the inner taper of the chuck and ensures consistently high concentricity!
- Increased holding forces and stiffness due to super finish!

Order no. <sup>1)</sup>	ER	Diameter	rising
ZT124-0xxx	11	1,0 - 7,0	0,5
ZT124-1xxx	16	1,0 - 10,0	0,5
ZT124-xxx2	20	1,0 - 13,0	0,5
ZT124-3xxx	25	1,0 - 16,0 17,0	0,5 1
ZT124-4xxx	32	2,0 - 21,0 22,0	0,5 1
ZT124-5xxx	40	3,0 - 26,0 27,0 - 30,0	0,5 1

1) Please add the respective diameter of the collet to the order no., e.g. ER 16 with Ø 2.5 = 124-1025.

## Collet set ER, 5 $\mu$ repeat accuracy

Order no. <sup>1)</sup>	ER	Diameter	rising	Piece/Set
ZT124-0S	11	1,0 - 7,0	0,5	13
ZT124-1S	16	1,0 - 10,0	1	10
ZT124-2S	20	2,0 - 13,0	1	12
ZT124-3S	25	2,0 - 16,0	1	15
ZT124-4S	32	3,0 - 20,0	1	18
ZT124-5S	40	4,0 - 26,0	1	23

1) Please add the respective diameter of the collet to the order no., e.g. ER 16 with Ø 2.5 = 124-1025.

## ER-Collets, repeatable accuracy 2 $\mu$

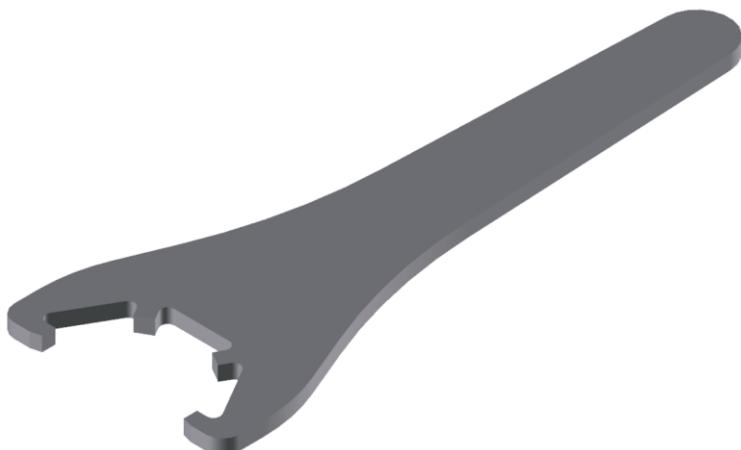

- High precision design with 2  $\mu$  concentricity and repeatability!
- All longitudinal edges deburred and additionally rounded. This protects the inner taper of the chuck and ensures consistently high concentricity!
- Increased holding forces and stiffness due to super finish!

Order no. <sup>1)</sup>	ER	Diameter	rising
ZT131-0xx	11	1,0 - 6,0	1
ZT131-1xx	16	1,0 - 6,0 8,0 + 10,0	1 1
ZT131-3xx	25	1,0 - 6,0 8,0 + 10,0 12,0 + 14,0 + 16,0	1 1 1
ZT131-4xx	32	2,0 - 6,0 8,0 + 10,0 12,0 + 14,0 16,0 + 18,0 20,0	1 1 1 1 1

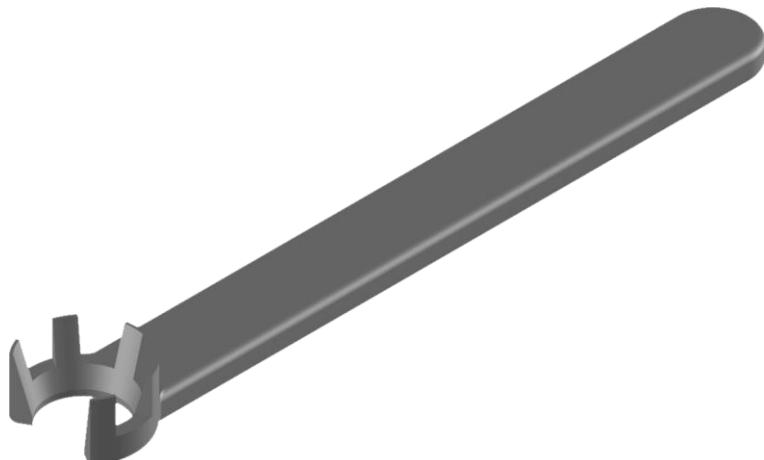

1) Please add the respective diameter of the collet to the order no., e.g. ER 16 with Ø 6.0 = 131-106.

1) Clamping nut "Hawk Eye" - ER "Mini

## Sealed ER-collets with «Cool Tool» nozzles - Repeatability 2µ

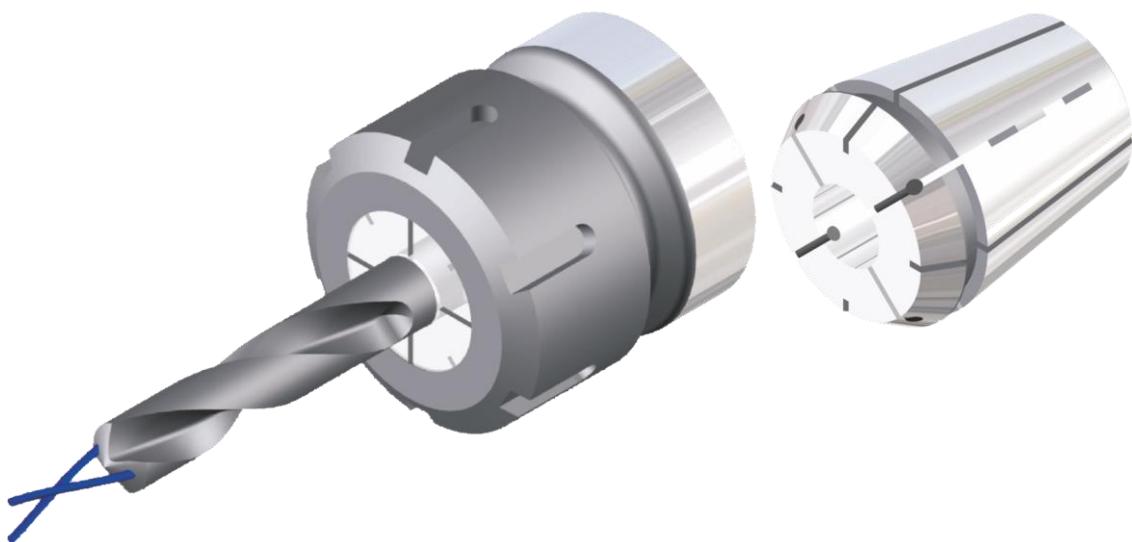

- Highest concentricity combined with effective cooling and best chip removal.
- applicable up to 120 bar.
- Only nominal dimensions can be clamped, shank tolerance h8.
- Tools with lateral clamping surface can only be used to a limited extent. This means that the surface must be behind the sealing plugs, otherwise the coolant escapes along the shank.

Order no. <sup>1)</sup>	ER	Diameter
ZT129-1xx	16	3 - 10
ZT129-2xx	20	3 - 13
ZT129-3xx	25	6 - 16
ZT129-4xx	32	6 - 20
ZT129-5xx	40	6 + 8 + 10 - 26

1) Please add the respective diameter of the collet to the order no., e.g. ER 25 with Ø 8 = 129-308.

## Sealed ER-collets - Repeatability 5µ

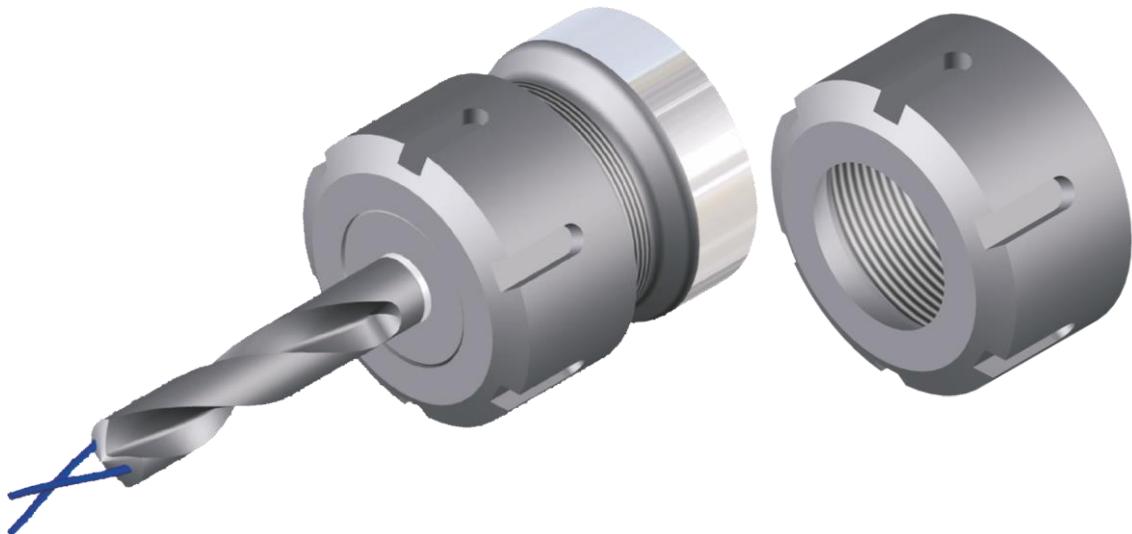

- For tools with internal cooling up to 120 bar!
- Only nominal dimensions can be clamped, shank tolerance h8.
- Tools with lateral clamping surface can only be used to a limited extent. This means that the surface must be behind the sealing plugs, otherwise the coolant escapes along the shank.

Order no. <sup>1)</sup>	ER	Diameter
128-0xx	11	3 - 7
128-1xx	16	3 - 10
128-2xx	20	3 - 13
128-3xx	25	6 - 16
128-4xx	32	6 - 20
128-5xx	40	6 + 8 - 26

1) Please add the respective diameter of the collet to the order no., e.g. ER 25 with Ø 10 = 128-310.

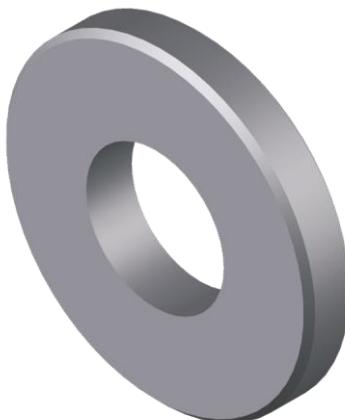

## Sealable ER clamping nuts

- **ATTENTION:** Sealable clamping nuts are 5 mm longer than standard nuts. This also increases the overall length of the chuck by 5 mm!
- For use with sealing washers, to seal conventional ER collets.
- For tools with internal cooling up to 100 bar!

Order no.	ER	SW
ZT107-21	16	25
ZT107-31	20	30
ZT107-41	25	-
ZT107-51	32	-
ZT107-61	40	-

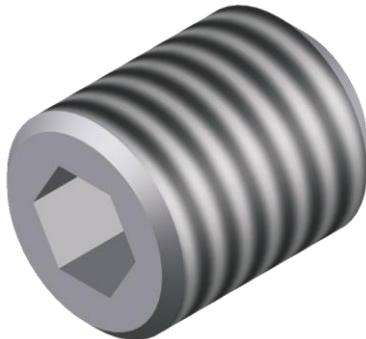

## Sealing washers for sealable clamping nuts

- **ATTENTION:** For high pressure of 100 bar can only be clamped with the nominal diameter.
- The sealing washers are available in 0.5 mm increments, i.e. they bridge 0.4 mm, from the nominal dimension to the smaller diameter. Thus, for a drill with D 5.7, a sealing washer with nominal dimension 6 mm is used.
- Please complete the order no. with the respective diameter of the sealing washer:
  - Example: Sealing washer for ER 25 with diameter 5.5 = 107-41055
  - Example: Sealing washer for ER 32 with diameter 12 = 107-5112
